## Introduction

**This report provides a summary of the results of the 2015 Scottish Maternity Care Survey for NHS Greater Glasgow and Clyde Health Board.**

The survey was sent in May 2015 to 1,193 women who gave birth in NHS Greater Glasgow and Clyde Health Board in February or March 2015.

The Scottish Maternity Care Survey was commissioned by the Scottish Government as part of the Scottish Care Experience Survey Programme. The survey provides high quality and comprehensive information on women's experiences of maternity care in 2015 and repeats the survey undertaken in 2013. The results will provide benchmark data for NHS Boards and will inform the current national review of maternity services in Scotland.

The survey was undertaken in partnership with the Nursing, Midwifery and Allied Health Professions (NMAHP) Research Unit. The Unit is funded by the Scottish Government Chief Scientist Office. The survey was carried out by a patient survey contractor, Quality Health Ltd.

The survey asked questions about women's experiences of:

- antenatal care
- care during labour and birth of their baby
- postnatal care in hospital
- feeding their baby
- care at home after the birth

The questionnaire is largely the same as the one used in 2013 and this allows for comparison of results between the two time points. A copy of the questionnaire is available at:

[www.gov.scot/Topics/Statistics/Browse/Health/maternitysurvey/2015Results](http://www.gov.scot/Topics/Statistics/Browse/Health/maternitysurvey/2015Results)

In total 425 women returned feedback on their experiences of care, a response rate of 36%. Of those women willing to provide information about themselves: 9% were under 25 years old; 62% were aged 25-34; 29% were aged 35 or over. Moreover 45% were first time mothers.

National, NHS Boards, hospital and technical reports are available at:

## Explanation of Results

For questions where women were asked about their experiences of maternity care, results are shown as the percentage of people who answered each question positively. For example for the question: 'Did you get enough information from either a midwife or a doctor to help you decide where to have your baby?' the percentage of women who answered 'yes, definitely' is calculated as a positive score and this is shown in green in a bar chart. Those who answered 'no' are counted as percentage negative shown in red, while those answering 'yes, to some extent' are shown as 'partially positive' in yellow (see below).

Question	Number of responses	Response			% Positive 2015	Change from 2013	Difference from Scotland 2015
		Positive	Neutral	Negative			
<b>1.1 Rated Results - Antenatal Care</b>							
B6. Got enough information from either midwife or doctor to help to decide where to have baby	500	50%	28%	23%	50%	-2%	-6% <sup>s</sup>

"% Positive 2015" shows the total percentage of women who responded positively to this question within this Health Board

"Difference from Scotland 2015" shows the difference between this Health Board's percent positive score in 2015 and the Scottish average in the same year, with a plus or minus sign depending on whether it is above or below the Scottish average.

"Change from 2013" shows the change in the percent positive score within this Health Board since the 2013 survey.

Differences which are statistically significant are marked with an S.

During the analysis of the 2015 data, some small revisions were made to the 2013 results. Where the 2013 results have changed, these are marked with an R. More information about these revisions is available at [www.gov.scot/stats/bulletins/01191](http://www.gov.scot/stats/bulletins/01191)

For each question the results have been calculated after removing any women who said that the question did not apply to them, who ticked 'don't know / can't remember' or who did not answer at all. The data has also been weighted to provide results which are more representative of the population.

## Explanation of Results (continued)

The classification of answers as positive, partially positive or negative for each question can be found in the technical report at: [www.gov.scot/stats/bulletins/01191](http://www.gov.scot/stats/bulletins/01191)

For service information questions for example 'Did you have a single baby, twins, quads or more babies' or multiple choice questions e.g. 'Were you left alone by midwives or doctors at a time when it worried you', the results are shown in tabular form.

Finally the results for the demographic questions such as age, health status are shown at the end of this report. These results are unweighted.

A number of mothers gave birth in a different Health Board from the one in which they live. In such cases, the mothers' responses for questions relating to hospital care, labour and the birth have been included in the results for the Health Board in which they gave birth. Responses to other questions, such as those relating to antenatal care and 'care at home', have been included in the results for the Health Board in which they live.

## Summary of Results for NHS Greater Glasgow and Clyde Health Board

This section provides the results for the four overarching questions where women were asked to rate the care that they received overall at each of the stages of their maternity care, before during and after the birth of their baby. Positive scores for these questions are based on the combination of the 'Excellent' and 'Good' answers.

The difference between the percent positive score for the Health Board and the Scottish average is shown in the final column. Differences which are statistically significant are marked with an S.
