## **1. Overview of The Scottish Fishing Fleet**

### **1.1 The regulation of the UK Fleet**

The structure and capacity of the UK and Scottish fishing fleets has, since 1983, been dictated primarily by the EU Common Fisheries Policy. Between 1997 and 2002 fleet structure was managed within the CFP through the fourth Multi Annual Guidance Programme (MAGP) designed to tailor fleet capacity to available fish stocks across the EU. Under this programme the UK fishing fleet was divided into eight segments, defined primarily by broad fishing method<sup>1</sup>, and capacity limits or effort reduction targets set for each segment. MAGP IV has now ended and has been replaced by global effort ceilings at member state level controlled through a system of entry/exit controls. In simple terms, a vessel can only enter the fleet when equivalent capacity has exited the fleet.

At a UK level, restrictive licensing has been the main Government instrument to bring the activities of the UK fishing fleet into line with MAGP and UK aims on fleet and catch management. Aside from a few limited exceptions, all vessels engaged in commercial sea fishing are required to hold a licence issued by UK Fisheries Departments. There is a finite number of licences in existence and no new licences are made available. This places a ceiling on the total number of vessels in the UK fishing fleet. In order to licence new vessels, fishermen must acquire one or more existing licences from other previously licensed vessels. Capacity penalties are applied when licences are transferred, or aggregated to form a larger licence unit, and these, together with the restricted number of licences on issue, form the mechanism for ensuring reductions in the capacity of the UK fleet to meet with EU and UK objectives.

The UK restrictive licensing controls, in combination with successive decommissioning schemes (1994-1997; 2001-2002 and 2003), explain many of the fleet trends in recent years and the figures presented here are interpreted in this context where appropriate.

### **1.2 Fleet size**

2004 saw a continuation of recent changes to the Scottish fleet, either directly or indirectly prompted by measures designed to conserve vulnerable whitefish stocks, particularly Cod. The most important of these measures in recent years has been the 2003-04 decommissioning scheme, under which 69 vessels were removed from the demersal fleet.

There were 2,394 active fishing vessels based in Scotland at the end of 2004, a net reduction of one since 2003. There were reductions in the number of active vessels at 8 out of 18 districts (Table I below) but there was no clear geographical pattern, with losses in one

---

<sup>1</sup> Pelagic Gears; Beam trawl; Demersal seines and nephrops; Lines & Nets; Shellfish-Mobile; Shellfish-Fixed; Distant Water; and vessels under 10 metres

district often balanced by gains in adjacent districts. This represents a more typical situation than in 2003 when losses linked to decommissioning mainly affected north east Scotland (districts)

*Table I: Changes in numbers of active Scottish based vessels 2003-04, by district.*

District	Number of active vessels		Change
	2003	2004

<b>Total</b>	<b>2,395</b>	<b>2,394</b>	<b>1</b>

**Source:** Table 6 and Scottish Fisheries Statistics 2003

The under 10 metre segment of the fleet increased by 30 vessels to 1,662 over the year to December 2004 and has been relatively stable at around 1,600 vessels since 1994 (Table 1). The over 10 metres fleet decreased by 4 per cent in 2004, continuing a long term decline. This segment is now 43 per cent smaller than in 1994, a trend which has affected the demersal (down 45 per cent), pelagic (down 49 percent) and shellfish (down 42 per cent) sectors.

## **1.3 Vessel capacity**

### **1.3.1 Overall length**

The average overall length of vessels in the over 10m fleet was 19.15 metres in 2004, a shortening of 7 cm on the 2003 figure. This reduction represents a continuing reversal of a previous trend towards increasing vessel length, seen up until 2000. Since 2000, the average within the over 10m segment has fallen by 89 cm and is now lower than at any time since 1993 (Table 1).

### **1.3.2 Engine Power**

Engine power statistics in previous years have been underestimated to an unknown degree, due the inclusion of vessels with engines operating at a higher power than permitted on their licences. In November 1999 in response to this problem, Fisheries Departments introduced special (concessionary) licensing arrangements and a timetable for compliance with engine power controls. Under the compliance timetable licence holders who have admitted to under declaration, had until the end of 2004 to ensure that either: (i) their true engine power is registered and to have acquired enough licence entitlement to cover this, or (ii) to have de-rated their engine to the figure on their licence. In practice, most have chosen to acquire extra licences to cover their operational engine power. Consequently, it needs to be borne in mind that after 1999, the trends in average engine power shown in Table 1 are complicated by the effect of an increasing number of owners declaring their true, higher engine power. Nevertheless, while this bias makes the actual rate of change unclear, it is clear that Scottish based vessels are now fishing with greater engine power on average than in the past.

The total registered engine power of the over 10m Scottish fleet was 343 thousand kW in 2004 (Table 1), a fall of one per cent since 2003 and 16 per cent lower than in 1994. However, average engine power, at 468 kW, has increased 3 per cent since 2003 and is 49 per cent greater than in 1994. The opposing trends of decreasing total fleet engine capacity and increasing average engine power per can be explained by a combination of factors: (i) the 43 per cent reduction in the over 10 m fleet since 1994 (Section 1.2); (ii) the “natural wastage” of licensed engine power that often accompanies the aggregation of several licences onto a single vessel<sup>2</sup> and; (iii) since 1999, the progressive correction of under declared engine power, in line with the concessionary licensing arrangements noted above.

## **1.4 Employment**

Total employment in the catching sector fell by only 1 to 5,275 between 2003 and 2004 (Table 11), while the number of fishermen regularly employed on Scottish based vessels at

---

<sup>2</sup> Occurs when the sum of the engine power capacities attached to the licences used in an aggregation, exceeds the maximum engine power of the vessel on which the aggregate licence is used. The excess engine power entitlement is then effectively lost from the fleet total.

4,124, was 156 higher in 2004 (Table 13). The number of irregularly employed (mainly part-time) fishermen in 2004 fell, by 15 per cent to 1,052 (Table 13).

At a district level, the biggest loss in regular employment occurred at Fraserburgh (-96 jobs) although the other districts in north-east Scotland together gained 47 regular fishing jobs. The biggest employment gain was seen at Ayr, which gained 178 regular fishing jobs in 2004 and has taken over from Fraserburgh in having the highest regular and total number of fishing jobs among Scottish districts. On the west coast there were reductions in regular employment at Ullapool (-28 regular fishermen), Mallaig (-32) and Oban (-42) but a gain of 37 regular jobs at Portree.

In 2004, includes 26 pelagic licences (category A) on vessels.

Category A licences allow full access to all stocks available to UK vessels.

Category B licences allow only restricted access to some UK available stocks.

Category C licences further restrict the range of stocks that can be fished.

Chart 5 Number of fishermen employed on Scottish based vessels, 1964 to 2004

## 2. Overview of Catches and Landings

### 2.1 Total landings into Scotland

The quantity and value of all landings into each Scottish Fishery Office district are shown in Figures 1 and 2, respectively.

In 2004, the total quantity landed into Scottish ports by vessels of all nationalities was 412 thousand tonnes, 9 per cent higher than in 2003 and 15 per cent higher than in 2000 (Table 17). There has however, been a substantial switch in the contribution of the demersal and pelagic sectors since 2000, with demersal species declining from 51 per cent to 31 per cent of landed volume, while pelagic species have increased from 35 per cent to 56 per cent (calculated from Table 17). This switch has been associated with quota reductions for all of the most important demersal stocks since 2000 (Table 15), with the combined quota for key demersal stocks<sup>1</sup> having fallen by one third over this period, while that for key pelagic stocks has remained relatively constant (Table II).

*Table II: Combined UK quota ('000 tonnes) for key demersal and pelagic stocks<sup>2</sup> 1999-2004 (based on Table 15)*

Quota ('000 tonnes)	2000	2001	2002	2003	2004	Change
						2000 - 2004
Combined key demersal stocks	210	159	186	128	141	-69 (-33%)
Combined key pelagic stocks	285	290	282	276	277	-8 (-3%)

### 2.2 Landings by UK vessels into Scotland by area and district

In 2004, UK vessels landed 337 thousand tonnes of all species, at a value of £259 million, into Scottish ports. These landings represent an increase of 10 per cent in quantity and 12 per cent in value from 2003 (Table 17).

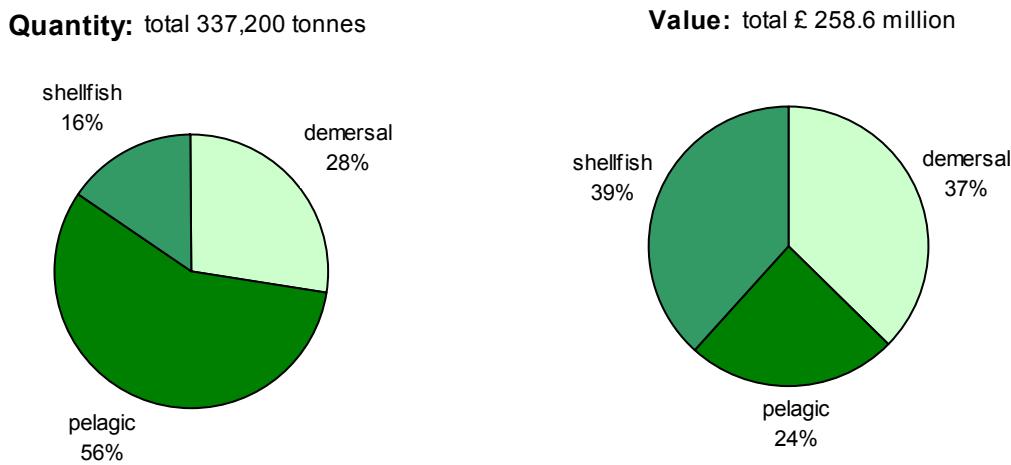

Pelagic landings formed just over half of the total quantity landed although the relatively low prices achieved by pelagic species resulted in the sector contributing only a quarter of the

<sup>1</sup> Key demersal stocks are considered to be North Sea & West of Scotland stocks of Cod, Haddock, Monkfish, Whiting, Saithe, Plaice and Norway Lobster.

<sup>2</sup> Key pelagic stocks are considered to be North Sea & West of Scotland stocks of Mackerel, Herring and Horse Mackerel.

total value landed (Chart I). Conversely, demersal species which fetch higher prices, made up 28 per cent of total quantity landed but formed 37 per cent of total value landed. High value shellfish landings formed only 16 per cent of the total by quantity but 38 per cent by value.

*Chart I: Landings by UK vessels into Scotland, 2004*

### **Regional breakdown**

*Eastern Area: Eyemouth, Pittenweem, Aberdeen, Peterhead, Fraserburgh, Buckie*  
(comparisons calculated from table 21)

- In 2004, landings by UK vessels increased at four of the six eastern districts, by between 26 per cent (Peterhead) and 56 per cent (Aberdeen), while the value of landings at these districts increased between 2 per cent (Buckie) and 44 per cent (Pittenweem). These increases were mainly due to more shellfish being landed at all districts.
- Only Fraserburgh and Buckie experienced small decreases in total amount landed in 2004 due to reduced pelagic and demersal landings, respectively.

*Northern Area : Wick, Orkney, Shetland, Stornoway, Kinlochbervie, Lochinver*

- Notable changes among the northern districts were an 18 per cent increase in the volume of demersal landings into Shetland and a 44 per cent rise in shellfish landed into Orkney.
- The total quantity landed at the other northern districts however, dropped by between 3 per cent (Wick) and 14 per cent (Kinlochbervie) largely as a result of a reduced demersal landings.

### *Western Area: Ullapool, Mallaig, Portree, Oban, Campbeltown, Ayr*

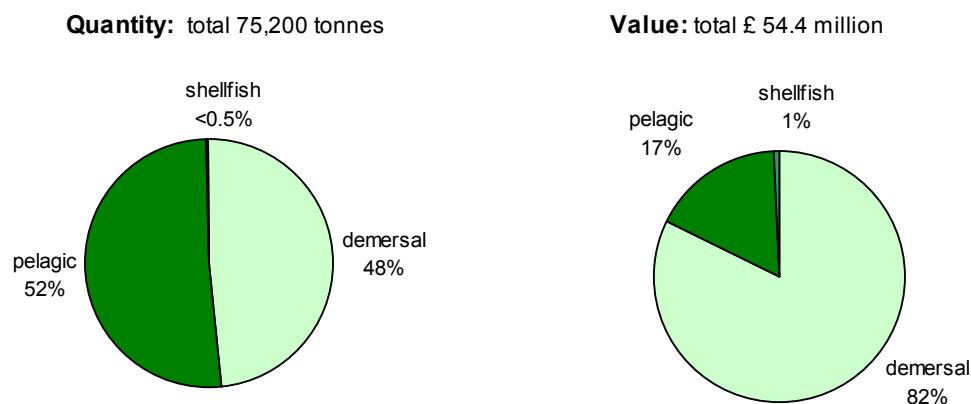

- Campbeltown was the only western district to show a slight increase in the quantity and value of landings in 2004 (up by 17 per cent and 5 per cent, respectively), entirely due to a 27 per cent increase in shellfish.
- The total quantities landed at the other five western districts fell by 10 per cent (Oban) to 38 per cent (Ayr), while the total value of landings fell by 5 per cent (Mallaig and Oban) to 16 per cent (Ayr). The decline of the demersal sector was the main reason behind these reductions except at Mallaig which experienced an 43 per cent drop in pelagic landings, and at Ayr where a 41 per cent fall in shellfish landings was the biggest change.

### **2.3 Landings by foreign vessels into Scotland**

Foreign vessels landed 75 thousand tonnes worth £54 million into Scottish ports in 2004, both figures slightly up the 2003 level. The proportion of total landings (volume) into Scotland to come from foreign vessels, decreased slightly from 19 to 18 per cent in 2004 but has been relatively stable at 15 to 19 percent since 2000 (Table 17).

The species types landed by foreign vessels also remained similar to recent years, with pelagic forming just over half of the 2004 total by volume but only 17% by value (Chart II), due to a preponderance of low value Blue Whiting (Table 24). Most of the remainder comprised demersal species, with negligible landings of shellfish (326 tonnes in 2004).

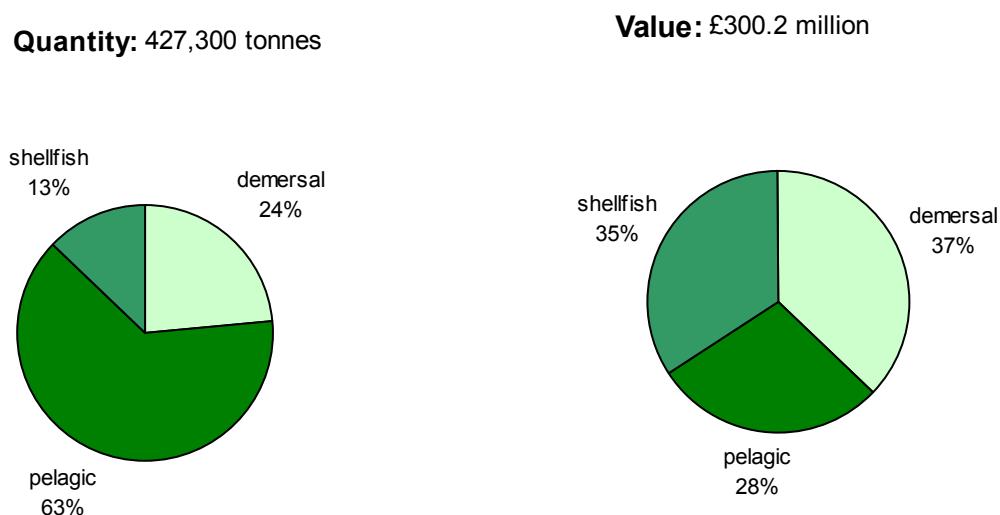

*Chart II: Foreign landings into Scotland by species type, 2004*

## 2.4 Landings by Scottish based vessels

Scottish based vessels made just under 71 thousand voyages in 2004, a broadly similar number to 2003 (Table 18). These voyages were however, more productive in 2004: the total quantity landed increased by 9 per cent to 427 thousand tonnes while the total value of these landings went up by 7 per cent to £300 million. The species composition of these landings was broadly similar to that of UK vessels landing into Scotland (Chart I), although pelagic species formed a slightly greater proportion of the Scottish vessel total (Chart III), due primarily to 79 thousand pelagic tonnes abroad (Table 17). Despite having declined sharply in total value since 1998, the demersal sector remained the most valuable to the Scottish based fleet in 2004, forming 37 per cent of the total £300 million landed (Chart III). Shellfish formed the next most valuable segment of the catch at 35 per cent while, despite the high volume, pelagic landings formed only 28 per cent of the total value.

*Chart III: Total landings by Scottish based vessels by species type, 2004*

Looking at the longer term trends, total landings by Scottish vessels have fallen by 94 thousand tonnes or 18 per cent since 2000 (calculated from Table 17) affecting the demersal sector most (down by 65 thousand tonnes or 39 percent). Pelagic landings by Scottish based vessels into UK ports have increased since 2000 by 78 thousand tonnes to 192 thousand tonnes, but this has been insufficient to offset a fall of 110 thousand (pelagic) tonnes landed abroad, resulting in an overall reduction of 32 thousand tonnes, or 11 per cent. Annual quantities of shellfish landed have remained relatively stable over this period.

The proportion of the annual catch of the Scottish based fleet landed into Scotland increased slightly between 2003 and 2004, from 79 to 82 per cent in value terms (calculated from tables 17 and 18).

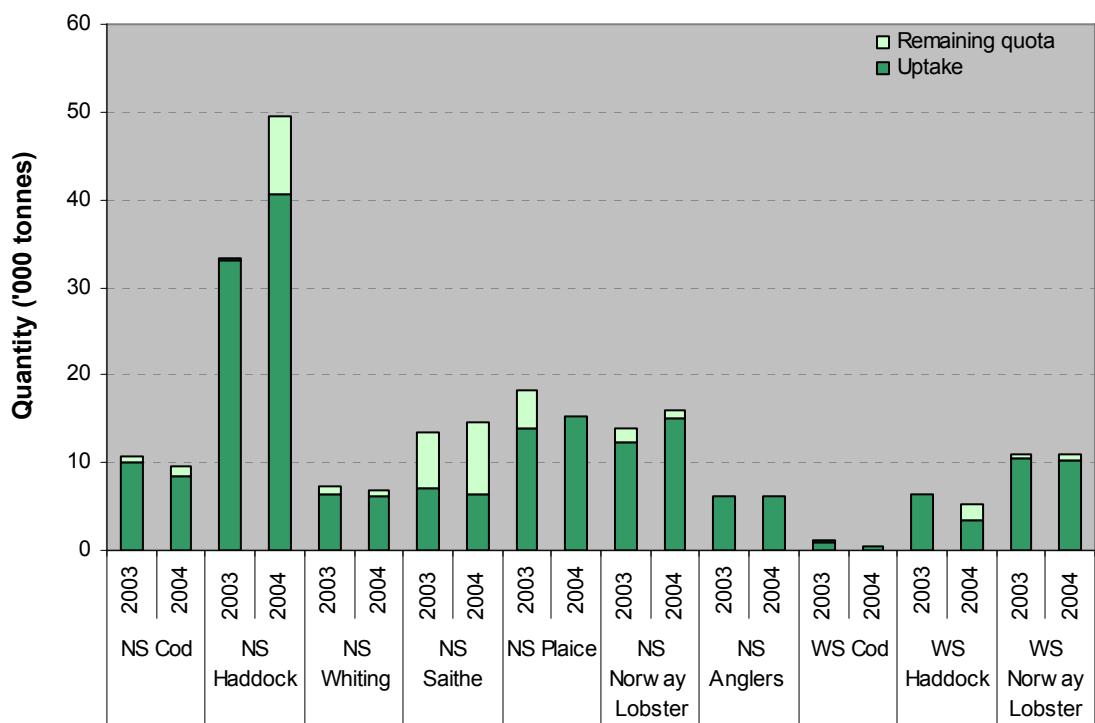

## 2.5 Uptake of UK quota

### 2.5.1 Demersal stocks

Quota uptake reached 90 per cent or more for seven of the ten most valuable demersal stocks (NS Cod, NS Whiting, NS Plaice, NS Norway Lobster, NS Monkfish, WS Cod and WS Norway Lobster; Chart IV, Table 15). Uptake of most of these key quota stocks in 2004 was broadly similar to that in 2003, with some notable exceptions:

- landings of NS Haddock were higher than in 2003 level, but with an increase in quota of almost 50 percent in 2004, the proportion of quota that this represented fell from 99 to 82 per cent
- uptake of WS Haddock fell from 99 to 65 per cent , despite a reduced quota in 2004
- uptake of NS Plaice increased (from 76 to 102 percent), largely a consequence of reduced quota.
- a further reduction in the uptake of North Sea Saithe, to only 44 percent in 2004. This trend might reflect the economics of fishing for this species, which fetches poor prices at market and is caught mainly in more northerly grounds where fishing is more expensive in terms of fuel and time spent at sea.

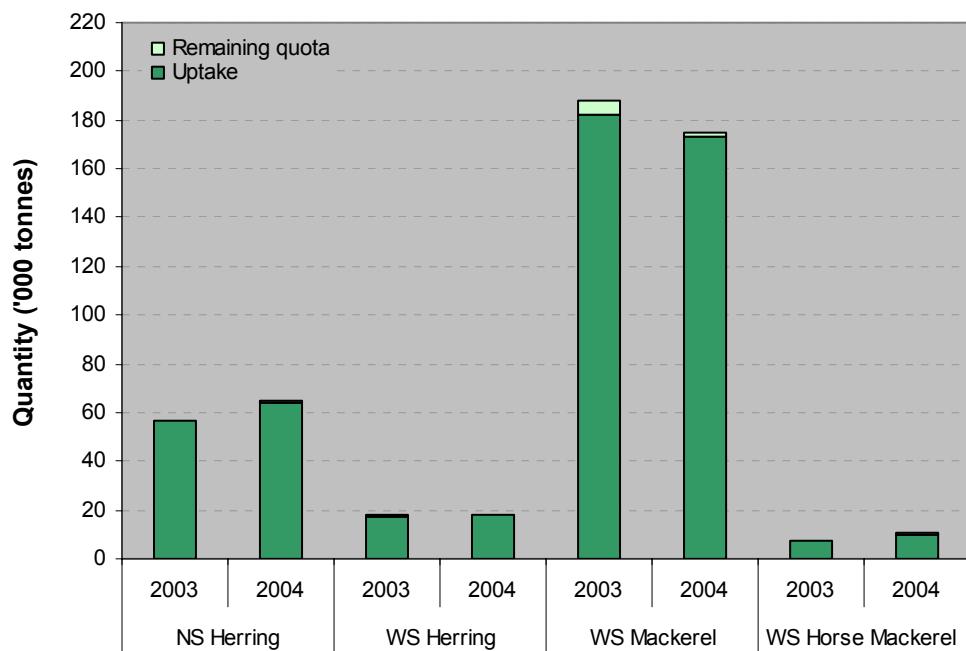

*Chart IV: Quota uptake of main North Sea (NS) and West of Scotland (WS) demersal stocks by UK vessels in 2003 and 2004*

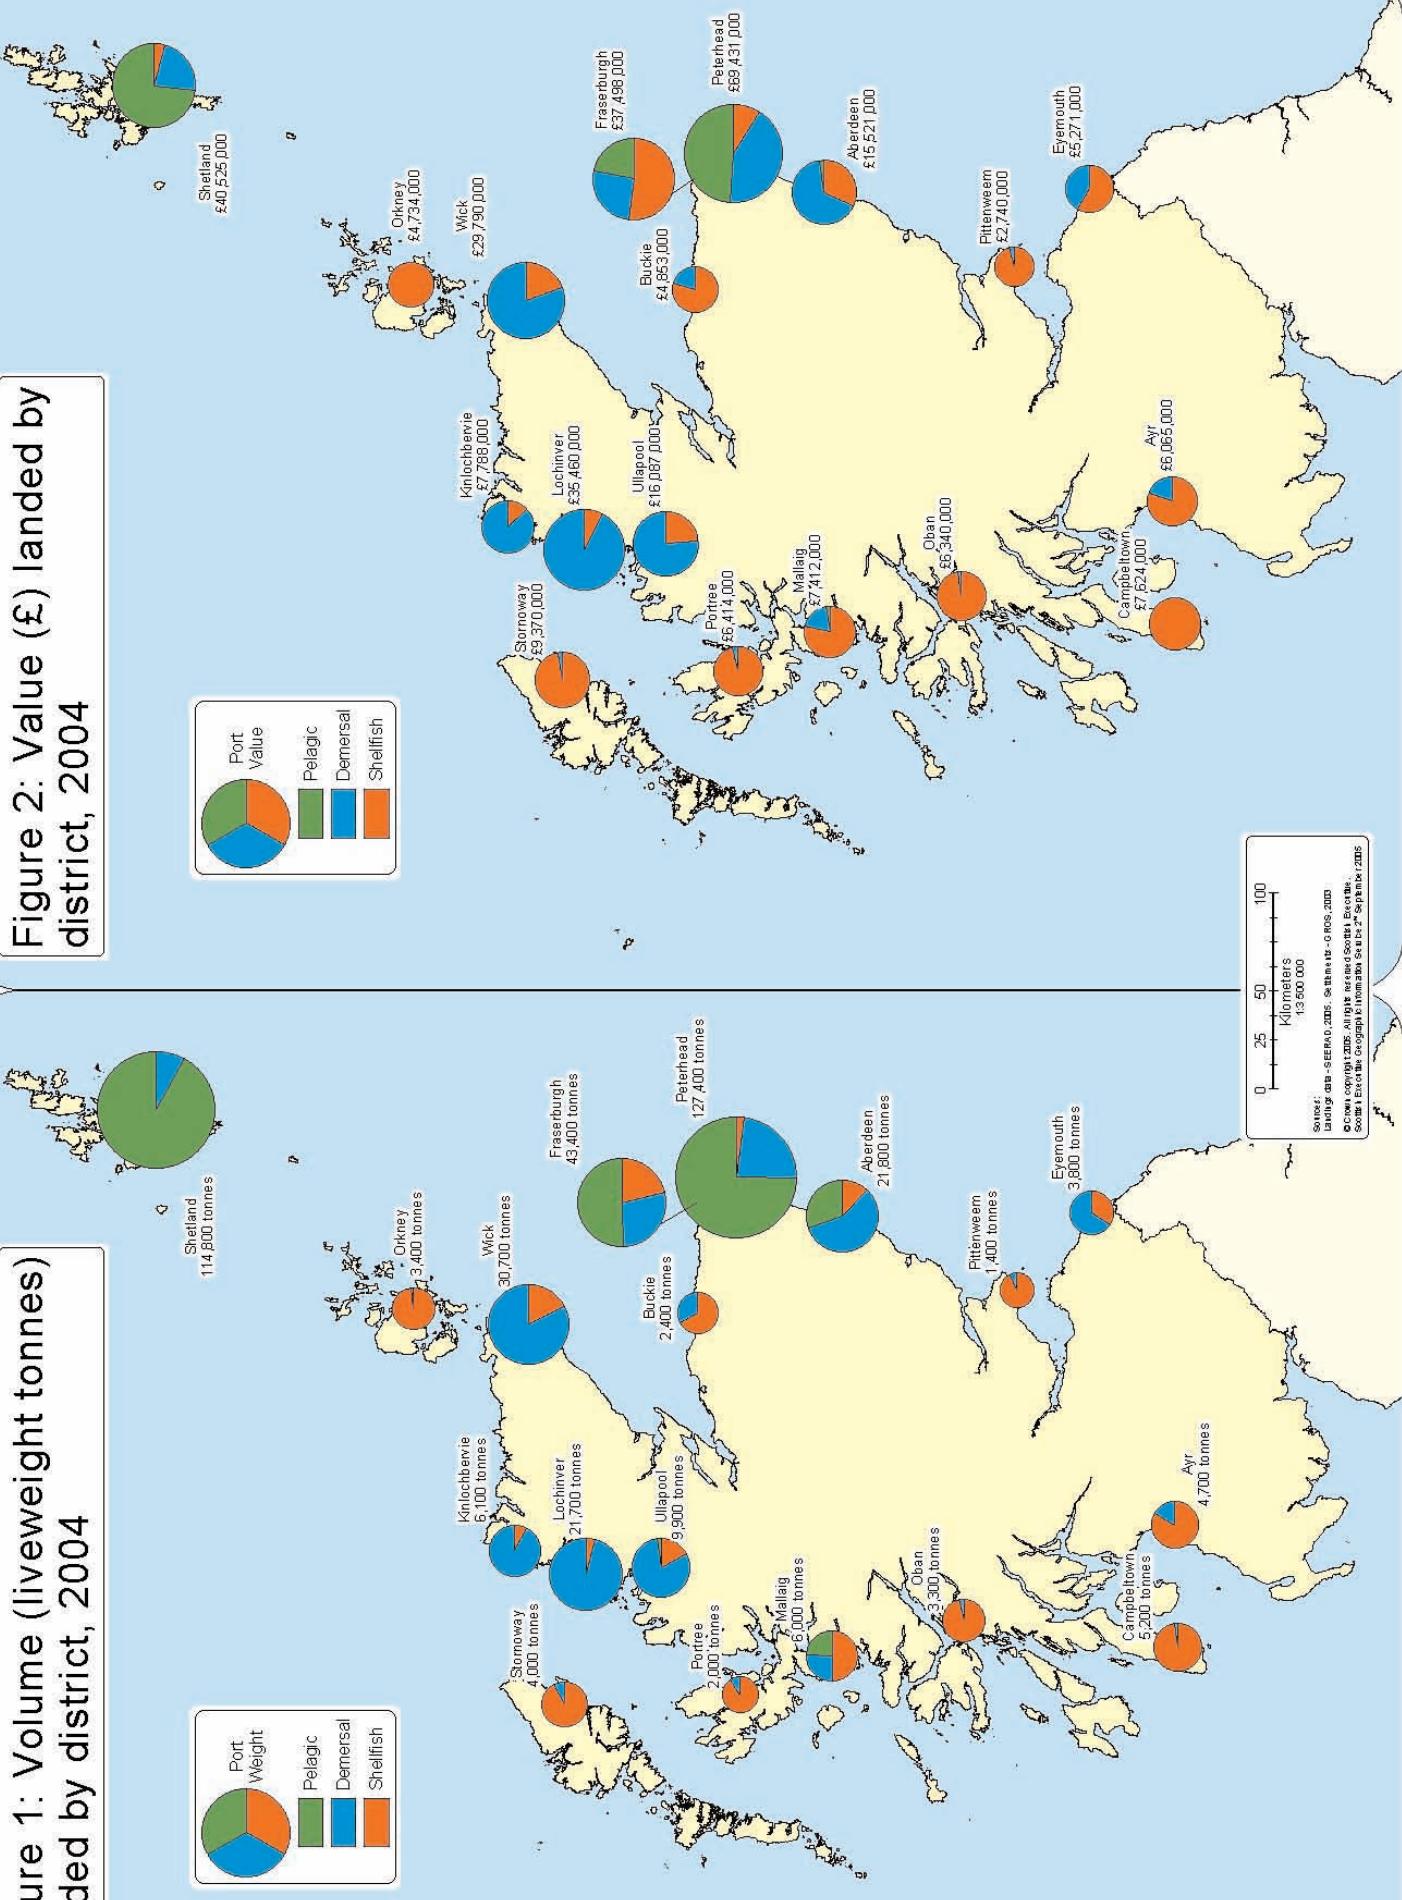

## 2.5.2 Pelagic stocks

Quota uptake for the four most important pelagic stocks continued to be high in 2004, approaching 100 per cent for North Sea Herring, West of Scotland Herring and West of Scotland Mackerel and exceeding 90 percent for West of Scotland Horse Mackerel (Chart V). Quota and landings in each case were broadly similar to 2003 levels.

*Chart V: Quota uptake of main North Sea (NS) and West of Scotland (WS) pelagic stocks by UK vessels in 2003 and 2004*

**Figure 1: Volume (liveweight tonnes) landed by district, 2004**

Source : EU Commission

UK figures are as reported to the EC Commission in 2004. This data, however, is still provisional and does not take into account flexibility arrangements, or small adjustments required to UK landings abroad by other member states.

# SCOTTISH EXECUTIVE STATISTICAL SERVICES

## Our aim

The aim of the Statistical Service is to provide relevant and reliable statistical information, analysis and advice that meet the needs of government, business and the people of Scotland.

## Our Objectives

### 1. To ensure that all statistics work is relevant to meeting user needs by

- Improving the range of statistics and analysis we produce for users inside and outside of government (including for key cross cutting policy areas such as the economy, social justice, area regeneration, equality and rural issues)
- Reviewing and where practicable improving timeliness.
- Providing more statistics disaggregated by age, gender, ethnicity and other characteristics.
- Developing more data for small areas through the Neighbourhood Statistics project
- Maintaining comparability of statistics across the UK.

### 2. To make better use of our statistics by

- Contributing more directly to policy processes inside and where possible outside government. These include community planning, performance information, measurement of government targets, better policy making and modernising government objectives.
- Improving access to and presentation of data and analysis, through better use of the Web, improved publications and improved systems for holding and accessing background data.
- Improving the advice provided on statistics to Ministers and senior management within the Executive.

### 3. To develop the reliability and integrity of official statistics by

- Assuring and improving quality as an integral part of data collection and analysis and through regular reviews in line with National Statistics quality strategy.
- Developing statistical methods, systems and classifications
- Maintaining and promoting integrity through implementation of the National Statistics Code of Practice and related protocols.

### 4. To ensure the efficient and effective delivery of statistics products and services by

- Making full use of all sources including administrative sources.
- Minimising the burden on data providers through Survey Monitoring & Advice
- Ensuring value for money.
- Employing staff with the necessary skills and ensuring development of expertise amongst existing staff.
- Ensuring effective use of Information and Communications Technology.
- Managing, promoting and upholding the integrity of the statistics profession.

### 5. To plan effectively and work together by

- Producing and implementing an annual Scottish Executive Statistics Plan.
- Developing more co-ordinated working arrangements with other analytical services in and out of the Executive.
- Working with the rest of the Government Statistical Service to develop joint approaches/solutions where appropriate.
- Improving the involvement of users and providers, working on a partnership basis wherever possible.

## This is a National Statistics publication

This Statistics Release has been produced to the standards set out in the National Statistics Code of Practice and Release Practice Protocol.

[http://www.statistics.gov.uk/about\\_ns/cop/default.asp](http://www.statistics.gov.uk/about_ns/cop/default.asp)

National Statistics are produced to high professional standards. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

Details of pre-release access will be provided in the Scottish Executive Statistics Website under 'Forthcoming Releases'

## Correspondence and enquiries
