

COVID-19: Strategic Framework – Levels Allocations Review

Summary Indicators and Trends

Background

The purpose of this paper is to provide a summary of data for the five headline local authority area indicators in the context of the level review on 15th December.

The review is based on the five agreed indicators – Cases/100k, test positivity, Cases per 100k forecast, Hospital forecast and ICU Forecast. The forecast indicators are updated weekly, with latest update on Thursday 10th December. The Cases/100k, test positivity measures are updated daily and include information published on Monday 14th December.

Table 1 below shows what the current guide indicators suggest as a level for each local authority. It also summarises trends in new cases and test positivity. A consistently increasing or decreasing trend is signalled if a local authority has either the new cases or test positivity indicator is increasing or decreasing for at least six days out of the last seven.

Tables 1-5 show the data used to derived each guide indicator for each Local Authority

- Table 1 shows trends in weekly cases per 100,000,
- Table 2 shows trends in test positivity.
- Table 3 shows the latest 2 week case forecasts
- Table 4 shows the projections of hospital bed demand for Covid
- Table 5 shows the projections of ICU demand for Covid

Annex A of this paper presents a report per Local Authorities summarising trends in the five indicators guiding levels. The purpose of the hospital and ICU projections is to give early indications of concern, clearly with higher levels of concern. As such, the outputs from the indicators shown in the Local Authority tables are shown as “very high” where the projections show a breach of capacity within 2 weeks for ICU or 3 weeks for Covid hospital beds, “high” where the projections show a breach of capacity within 3 weeks for ICU or 4 weeks for Covid hospital beds, “of concern” where the projections show a breach of capacity within 4 or 5 weeks for ICU or 5 or 6 weeks for Covid hospital beds, and “low” if the projections don’t breach capacity within this time period.

See: [further guidance on the definitions of each indicator.](#)

Table 1 – New cases per 100,000 by Local Authority. Weekly total up to date shown.

Data published up to 14th December.

¹ Figures for Covid capacity as agreed by NHS Boards

The ranges presented here remain work in progress. In particular, we are likely to adjust the ranges against wider public health judgements to ensure they are as useful as possible in generating signals prompting a holistic review of the level applied to a given local authority area.

An area is considered for level 4 when it broadly meets one of the following conditions:

- a. more than 300 cases over 7 days per 100,000 people for the local authority
- b. over 10% positive tests over 7 days for the local authority – twice the rate for national concern given by WHO
- c. probability over 75% of 500 cases over 7 days per 100,000 forecast for the local authority in two weeks' time
- d. the projection of hospital bed use in the health board in three weeks' time is greater than the health board's estimated capacity
- e. the projection of ICU bed use in the health board in two weeks' time is greater than twice its normal capacity

An area is considered for level 3 when it does not meet level 4 and it broadly meets one of the following conditions:

- a. between 150 and 300 cases over 7 days per 100,000 people for the local authority
- b. between 5% and 10% positive tests over 7 days for the local authority
- c. probability over 75% of 300 cases over 7 days per 100,000 forecast for the local authority in two weeks' time
- d. the projection of hospital bed use in the health board in four weeks' time is greater than the health board's estimated capacity
- e. the projection of ICU bed use in the health board in three weeks' time is greater than twice its normal capacity

An area is considered for level 2 when it does not meet level 3 and it broadly meets one of the following conditions:

- a. between 75 and 150 cases over 7 days per 100,000 people for the local authority
- b. between 3% and 5% positive tests over 7 days for the local authority
- c. probability over 75% of 100 cases over 7 days per 100,000 forecast for the local authority in two weeks' time
- d. the projection of hospital bed use in the health board in five weeks' time is greater than the health board's estimated capacity
- e. the projection of ICU bed use in the health board in four weeks' time is greater than twice its normal capacity

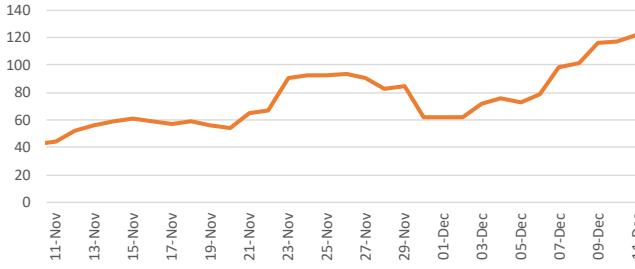

An area is considered for level 1 when it does not meet level 2 and it broadly meets one of the following conditions:

- a. between 20 and 75 cases over 7 days per 100,000 people for the local authority
- b. between 1.5% and 3% positive tests over 7 days for the local authority
- c. probability over 75% of 50 cases over 7 days per 100,000 forecast for the local authority in two weeks' time
- d. the projection of hospital bed use in the health board in six weeks' time is greater than the health board's estimated capacity
- e. the projection of ICU bed use in the health board in five weeks' time is greater than twice its normal capacity

Note that these indicators combine Local Authority and Health Board data. In particular, indicators relating to hospital and ICU capacity apply for all the local authorities in that Health Board area.

Annex A: Local Authority trends and scores

- Case level still moderate with large increase (60%) in cases over past week. Increased in 6 of last 7 days.
- Test positivity increased to high. Up 6 of last 7 days. Up from 3.9% to 6.1%.
- Case forecast now very low.
- Low hospital forecast for NHS Grampian.
