Records inspected remotely on 27/10/2020

Organic stock on site. Salmon input from Ireland

Cumulative lumpfish mortality of 23.8% since input. Attributed to pseudomonas in first batch, input to site during April (beginning of cycle). Moribund fish removed and humanely culled. Following inputs have performed better with no issues from health screening..

Cumulative wrasse mortality of 16.2% since input. Increased mortality in farmed wrasse, input to farm during September. Wild caught wrasse have performed better. Nothing picked up through health sampling, thought to have not adapted well to cage environment.

August vet report detailed physical damage to wrasse and secondary bacterial infection. Site staff removed and culled all moribund fish and those showing signs of disease as per mortality removal SOP.

Seal observed in cage 52 on 12th August 2020, a vertical hole was subsequently discovered in base of net (approx 270mm x 54mm) and repaired by divers. It is suspected the seal entered the cage through this hole based on the small size of the seal. The seal was dispatched by a licenced marksman on the same day. Site suspects no fish escaped, no fish seen outside of cage or drop in feed response observed during subsequent weeks. However a count of the cage has yet to be carried out, this will be completed during the next lice treatment of fish, likely to take place in spring 2021. Dive inspections found no damage to the other nets onsite. Nets had been previously inspected by divers on 30/06/20 with no damage seen. This incident was not reported to the FHI, DSFB or SSPO at the time (RSPCA were notified). A retrospective notification was submitted to the FHI on 28/10/2020 (MSe120820SAL1). Since the incident net tension has been increased. A licenced marksman has dispatched a further seal on 26/10/20. The seal had been seen patrolling the site and diving at nets. A.D.D.'s are not permitted to be used on site.

Lice numbers below CoGP treatment thresholds throughout cycle.

Gill scores have recently increased, a H2O2 treatment was carried out w/b 19/10/2020.

Fish sampled for VMD appeared healthy

Site thermometer used due to battery failure in FHI thermometer.

C.N.A. records submitted to FHI for inspection on 04/11/2020 and 11/11/2020.
