

Dear Sir,

3/5/08

With reference to the proposed Lamcush Bay marine reserve.

1. I wish to totally endorse these proposals to protect future stocks.

2. In order to promote the regeneration of both scallops and other marine species the reserve no/take zone is imperative.

3. I have seen at first hand over many years having been a chart Diver, the total destruction of marine habitat after scallop dredging.

It is very short sighted for the fishing community to object to this quite small area of conservation and I suggest this is a case of greed over need.

Thank you for noting my sufficient and views may I apologise for the wording as I am currently visually impaired

Mine. Faithfully
