## Economy Series

A NATIONAL STATISTICS PUBLICATION FOR SCOTLAND

SCOTTISH MANUFACTURED EXPORTS ESTIMATES  
FOR THE FIRST QUARTER OF 2008

2 July 2008

Scottish manufactured export sales increased by 2.3 per cent in real terms in the first quarter of 2008 and grew by 3.2 per cent over the year to the end of March 2008, according to estimates published today by the Scottish Government.

Index of Scottish Manufactured Exports

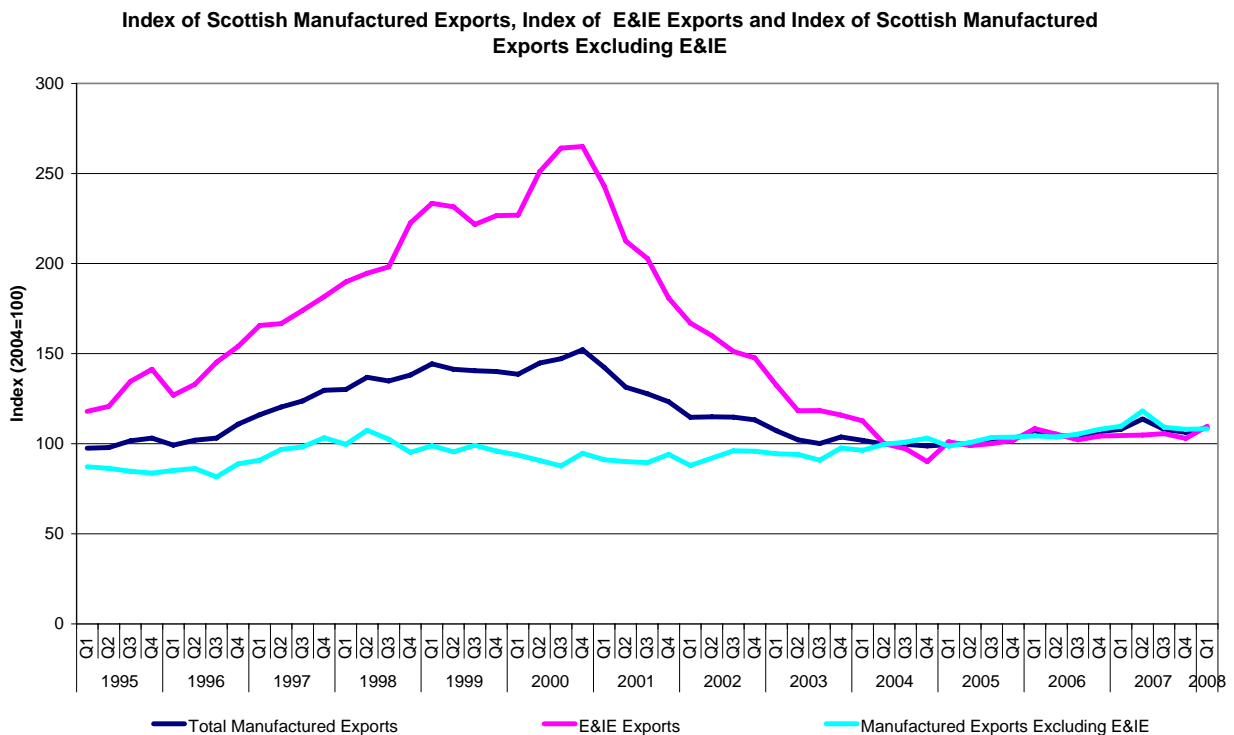

The main findings are:

- Scottish manufactured export sales increased by 2.3 per cent in real terms in 2008 Q1 (seasonally adjusted) and grew by 3.2 per cent over the 2007/08 financial year.
- Over the quarter, the main industries contributing to the increase in manufactured export sales were electrical and instrument engineering and mechanical engineering which grew by 6.6 per cent and 19.3 per cent respectively. The wood, paper, publishing & printing (+2.2%) and textiles, fur & leather (+3.4%) industries also grew over the quarter. The remaining industries all showed declines in export sales with transport equipment (-10.4%); food and tobacco (-14.8%); and chemicals, coke, refined petroleum & nuclear fuel (-2.7%) showing the most significant decreases.

- Over the year to March 2008, the engineering & allied industries grew by 5.9 per cent in real terms and, in doing so, contributed most to the overall growth in export sales of 3.2 per cent. Wood, paper, publishing and printing (+16.1%), metals & metal products (+13.6%) and drink (+1.3%) also grew over the year. Chemicals, coke, refined petroleum & nuclear fuel (-4.5%) and food & tobacco (-13.0%), textiles, fur & leather (-5.1%) and other manufacturing (-3.5%) all showed a fall in export sales over the year.

### Longer Term Trends

- Over 1995 Q1 to 2000 Q4, the index of manufactured exports exhibited a period of strong growth (1.9% average quarterly growth) which was followed by a sustained period of decline from 2000 Q4 to 2004 Q4 (2.7% average quarterly decline). Thereafter there has been some evidence of modest trend growth in export sales.
- The growth and decline in manufactured exports over the period 1995-2004 is largely explained by the electrical and instrument engineering sector which grew by 95.7 per cent between 1995 and 2000 and fell by 66.0 per cent between 2000 Q4 and 2004 Q4.

- At its peak, in 2000, the electrical and instrument engineering sector accounted for 58 per cent of Scotland's manufactured exports. This industry remains Scotland's largest exporting sector and accounted for 33 per cent of Scotland's total manufactured exports in 2007.

## **BACKGROUND NOTES**

### **Methodology**

1. Estimates of Scottish manufactured exports are compiled on the standard industrial classification UKSIC(2003). Implemented on 1 January 2003, UKSIC(2003) is a minor revision to UKSIC(92), in line with the latest revision of the European Union classification system.
2. The estimates are derived from data on sales of goods produced by the Scottish manufacturing industry for export outwith the UK. The Office for National Statistics (ONS) collect the data used to produce these figures in their Monthly Production Inquiry. Export estimates for the refined petroleum products industry are calculated using a volume series supplied by the Department for Business, Enterprise and Regulatory Reform (BERR) and export ratios estimated using the Scottish Government's Global Connections Survey.
3. The main purpose of the Index is to identify volume changes over time. Accordingly, data are deflated to 2000 prices using UK export producer price indices, which are produced by the ONS. These constant (2000) price estimates provide a more appropriate measure for monitoring change over time as they have had the effect of price changes removed.
4. Deflated exports sales of the companies covered by the Inquiry are grossed up to represent the entire population of each industry using the Inter Departmental Business Register.
5. Cross-referencing of company information from the Global Connections Survey (GCS) is carried out annually to enhance the level of consistency between individual company records held in both sources. GCS annual data are currently only available for calendar years 2002 - 2006, so rescaling of pre-2002 data takes place to ensure continuity.
6. The data have been seasonally adjusted where appropriate using the X-12-ARIMA technique. Further information is available in an article published in the 2006 edition of Scottish Economic Statistics. (<http://www.scotland.gov.uk/stats/ses/>).
7. In total, the Index is based on a sample of around 1,000 Scottish manufacturing companies per quarter. This sample covers all sizes of unit across the manufacturing sector.

### **The Global Connections Survey**

8. The annual Global Connections Survey (GCS) provides a current price estimate, in monetary terms, of the value of exports sales for the economy as a whole; the only survey to do so. The Quarterly Index of Manufactured Exports provides a time series of growth in export sales, at constant prices, for the manufacturing industry. The annual estimate of total exports from Scotland derived from the Global Connections Survey indicates that the manufacturing sector accounted for £13.6 billion in 2006 - 66 per cent of all exports from Scotland.
9. Further information about the methodology of the Index of Manufactured Exports and the Global Connections Survey can be found on the website at [www.scotland.gov.uk/exports](http://www.scotland.gov.uk/exports)

### **Volatility**

10. Some of the indices for smaller industries can be particularly volatile when examined on a quarterly basis. In some cases, this is due to the nature of the industry (e.g. transport equipment), in others it can be due to the relatively small size of the industry in export terms (e.g. food & tobacco). For these reasons, care should be taken when drawing any firm conclusions from individual quarter results. Estimates of annual changes will be more robust than quarterly changes.

## Revisions

11. It is the Scottish Government's policy to use all the data available at the time of publication to ensure that the best possible estimates are provided. This inevitably leads to revisions to previously published estimates. All quarters affected by data revisions are updated at the earliest possible opportunity. This allows those using the data for long-term analysis to have a long-term consistent series. We have a commitment to improve continually the quality of the index of manufactured exports, and part of this commitment involves an ongoing programme to develop the data sources and methodologies used in the compilation of the series.

Comparison of Current Index with Previously Published Estimates

12. The chart above shows a comparison of the overall Index this quarter and the index published in April 2008. Tables 3 and 4 provide detailed information of revisions at industry level. Quarterly revisions which balance out to zero over the year usually indicate that there has been a change to the seasonal pattern of the series rather than a revision to the data for any companies.

13. Revisions this quarter have resulted from revisions to information previously supplied by respondent companies and re-estimation of seasonal adjustment factors. The series most affected are: mechanical engineering and other manufacturing.

## Future Revisions

14. There are no planned changes to the methodologies used in the production of the Index of Manufactured Exports next quarter.

## National Statistics

15. National Statistics are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference.

Mercury and Profile users may obtain a copy of the Index tables by telephoning the number below or via the website [www.scotland.gov.uk/exports](http://www.scotland.gov.uk/exports)

# SCOTTISH GOVERNMENT STATISTICIAN GROUP

## OUR AIM

To provide relevant and reliable information, analysis and advice that meet the needs of government, business and the people of Scotland.

## OBJECTIVES

1. To produce statistics and analysis relevant to user needs by
  - Developing our understanding of customer requirements to ensure statistics are kept relevant and analysis is well targeted;
  - Developing the range of statistics and analysis we produce;
  - Where practicable improving timeliness;
  - Providing more statistics disaggregated by age, gender and ethnicity;
  - Developing more data for small areas through the Neighbourhood Statistics project;
  - Contributing to production of comparable statistics across the UK and internationally.
2. To ensure effective use of our statistics by
  - Contributing more directly to policy processes inside and where possible outside government;
  - Improving access to and presentation of data and analysis;
  - Improving the advice provided on statistics.
3. To work effectively with users and providers by
  - Maintaining arrangements to consult and involve users and providers;
  - Involving users and providers in planning developments in outputs and processes;
  - Minimising the burden on data providers through dropping or streamlining collections as appropriate, to ensure the benefits of the information justify the costs of collection.
4. To develop the quality of statistics by
  - Assuring and improving quality as an integral part of data collection and analysis and through regular reviews in line with National Statistics quality strategy;
  - Developing statistical methods, systems and classifications;
  - Working with the rest of the Government Statistical Service to develop joint approaches/solutions where appropriate.
5. To assure the integrity of statistics by
  - Maintaining and promoting integrity through implementation of the National Statistics Code of Practice and related protocols;
  - Safeguarding the confidentiality of data subjects.
6. To ensure the efficient and effective delivery of statistics products and services by
  - Making best use of all sources including administrative sources;
  - Working with other analysts to maximise the contribution of our own and other analysts' work;
  - Ensuring value for money;
  - Making best use of Information and Communications Technology;
  - Ensuring effective communication within the Statistician Group.
7. To develop our workforce and competences
  - Ensuring recruitment of staff with the necessary skills and potential;
  - Ensuring development of expertise amongst existing staff;
  - Promoting and upholding the standards of the statistics profession.

## This is a National Statistics publication

"This is a National Statistics publication. It has been produced to high professional standards set out in the National Statistics Code of Practice Protocol - see [www.statistics.gov.uk/about\\_ns/cop/default.asp](http://www.statistics.gov.uk/about_ns/cop/default.asp)

These statistics undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference."

Details of pre-release access will be provided in the Scottish Government Statistics Website under 'Forthcoming Releases'

## Correspondence and enquiries

<p>Enquiries on Scottish Manufactured Exports should be addressed to:</p> <p>Andrew Mortimer Office of the Chief Economic Adviser Scottish Government Room 4.ER, St Andrews House Edinburgh, EH1 3DG Telephone: (0131) 244 3771; Fax: (0131) 244 2824 e-mail: andrew.mortimer@scotland.gsi.gov.uk</p>	<p>General enquiries on Scottish Government statistics can be addressed to:</p> <p>Ryan Stewart Office of the Chief Statistician Scottish Government 3 Floor West Rear, St Andrews House EDINBURGH EH1 3DG Telephone: (0131) 244 0442; Fax: (0131) 244 0335 e-mail: statistics.enquiries@scotland.gsi.gov.uk</p>
