## SCOTTISH FISH FARMS

## Annual Production Survey 2003

This report was prepared for the Scottish Executive by FRS Marine Laboratory

## Foreword

The annual production survey of fish farms in Scotland for 2003 was carried out by Fisheries Research Services (FRS), an agency of the Scottish Executive Environment and Rural Affairs Department (SEERAD). This survey collates annual production data from registered Scottish fish farm sites. Surveys conducted by producer or consumer organisations may be collected annually or by quarter. These are produced independently of FRS and may not be directly comparable.

Responses to questionnaires (detailed in Appendix 1 (a-d)) from Scottish fish farming companies covering the period 1 January - 31 December 2003 are summarised in this survey. The survey is structured to allow readers to follow industry trends within the trout, salmon and other farmed species sectors, in addition to providing information on production in 2003. Where available, statistics are given for the 13-year period 1991-2003. Data from previous years have been reassessed and updated where necessary. To allow direct comparison with data provided in previous surveys, production information by region is presented in SEERAD defined areas.

The publication of this survey has been delayed due to an initial comparison of 2003 production totals with those of another public body which indicated anomalies at both regional and company levels. In the interests of accuracy SEERAD identified a number of questionnaires that required an independent audit. All anomalies were resolved but this process has taken a number of months to complete.

The co-operation of the fish farming industry in completing the questionnaires is gratefully acknowledged.

## SUMMARY

The tables below summarise the full results from the 2003 fish farms annual production survey.

## Rainbow Trout (Oncorhyncus mykiss)

|  |  | 2002 | 2003 |
| :--- | :---: | :---: | :---: |
| Total production | (tonnes) | 6,659 | 7,085 |
| Production for the table | (tonnes) | 5,711 | 6,189 |
| Production for restocking | (tonnes) | 948 | 896 |
| Number of staff employed |  | 160 | 148 |
| Mean productivity | (tonnes/person) | 41.6 | 47.9 |
| Number of ova laid down to hatch | (millions) | 22.1 | 26.3 |
| Number of ova imported | (millions) | 21.4 | 25.6 |

In 2003 rainbow trout production increased by 426 tonnes. Employment decreased by twelve staff members and productivity per person increased to 47.9 tonnes. There was an increase of 4.2 million ova laid down to hatch and the number of ova imported also increased.

Other Species (including Arctic charr, Salvelinus alpinus; Brown trout, Salmo trutta; Cod, Gadus morhua; Halibut, Hippoglossus hippoglossus)

|  |  | 2002 | 2003 |
| :--- | :---: | :---: | :---: |
| Total production | (tonnes) | 370.1 | 515.3 |
| Number of staff employed | (full-time) | 69 | 73 |
|  | (part-time) | 30 | 24 |
| Number of ova laid down to hatch | (millions) | 134 | $141^{\text {a }}$ |
| Number of ova imported | (millions) | 0 | $0^{\text {b }}$ |

[^0]In 2003 the production of other species increased by 145.2 tonnes. This was mainly due to the introduction of cod production ( 82.1 tonnes). Although overall employment decreased by two, the number of full time staff employed increased by four. There were also significant increases in the number of ova laid down to hatch, although due to the small number of companies involved, it is not possible to summarise these data without revealing the figures of individual companies.

## Atlantic salmon (Salmo salar)

Smolts

|  |  | 2002 | 2003 |
| :--- | :--- | :---: | :---: |
| Number of ova produced | (millions) | 108 | 115.6 |
| Number of ova laid down to hatch | (millions) | 86.7 | 80.7 |
| Number of ova exported | (millions) | 8.2 | 2.2 |
| Number of ova imported | (millions) | 22.6 | 21.2 |
| Number of smolts produced | (millions) | 47.2 | 44.4 |
| Number of smolts put to sea | (millions) | 50.1 | 43.8 |
| Number of staff employed |  | 405 | 373 |
| Mean productivity (000s smolts/person) |  | 116.4 | 119.1 |

The production of ova increased by over seven million in 2003 and the number of ova laid down to hatch decreased by almost six million. Imports of ova decreased, while there was a continued drop in ova exports. Smolt production was down by almost three million. The number of staff employed decreased by 32 and mean productivity increased.

## Production fish

|  |  | 2002 | 2003 |
| :--- | :---: | :---: | :---: |
| Total production | (tonnes) | 144,589 | 169,736 |
| Production of 0-year fish | (tonnes) | 824 | 276 |
| Production of grilse | (tonnes) | 33,609 | 32,977 |
| Production of pre-salmon | (tonnes) | 56,621 | 63,228 |
| Production of salmon | (tonnes) | 53,535 | 73,255 |
| Mean fish weight 0-year | $(\mathrm{kg})$ | 3.03 | 3.37 |
| Mean fish weight grilse | $(\mathrm{kg})$ | 3.40 | 3.85 |
| Mean fish weight pre-salmon | $(\mathrm{kg})$ | 4.15 | 4.50 |
| Mean fish weight salmon | $(\mathrm{kg})$ | 4.71 | 4.69 |
| Number of staff employed |  | 1,306 | 1,217 |
| Mean productivity | tonnes/person | 110.7 | 139.5 |

Production tonnage increased by $17.4 \%$ with an increased harvest at later stages of production. Staff numbers decreased by 89. Mean productivity showed a significant increase. The total production for 2002 has been altered compared to previous reports. This is due to data having been reassessed and updated where necessary.

## Smolt survival (percentage harvested)

| Survival (\%) | Years 0+1 | Year 2 | Total |
| :---: | :---: | :---: | :---: |
| 2000 input year class | 52.0 | 25.1 | 77.1 |
| 2001 input year class | 49.5 | 32.1 | 81.6 |

Overall smolt survival increased by $4.5 \%$ compared with the 2000 year class.

## 1. RAINBOW TROUT (Oncorhynchus mykiss)

Annual production surveys were sent to all 37 companies registered with the Scottish Executive and engaged in the production of rainbow trout in Scotland during 2003. Returns were received from all 37 companies, covering the 56 sites currently in production.

## Production

Table 1a: Total production (tonnes) of rainbow trout during 1991-2003

| Year | Tonnes | Year | Tonnes |
| :---: | :---: | :---: | :---: |
| 1991 | 3,334 | 1998 | 4,913 |
| 1992 | 3,953 | 1999 | 5,834 |
| 1993 | 4,023 | 2000 | 5,154 |
| 1994 | 4,263 | 2001 | 5,466 |
| 1995 | 4,683 | 2002 | 6,659 |
| 1996 | 4,630 | 2003 | 7,085 |
| 1997 | 4,653 |  |  |

Production increased in 2003 by 426 tonnes, an increase of over $6 \%$. This was mainly due to an increase in production from freshwater cages for the table trade. Within the table trade, significant increases were seen in the large and medium sizes of fish, with a decrease in small fish. In the restocking trade, the production of medium and small fish showed an increase, while large sized fish decreased.

Table 1b: Production (tonnes) for the table trade during 1994-2003 according to weight category

| Year | $<450 \mathrm{~g}$ | $450-900 \mathrm{~g}$ | 200 g | Total |
| :---: | :---: | :---: | :---: | :---: |
|  | $« 1 \mathrm{lb}$ | $1-2 \mathrm{lbs}$ | $>2 \mathrm{lbs}$ | Tonnes |
| 1994 | 2,376 | 288 | 1,038 | 3,702 |
| 1995 | 2,736 | 199 | 1,149 | 4,084 |
| 1996 | 2,701 | 181 | 1,002 | 3,884 |
| 1997 | 2,646 | 104 | 1,098 | 3,848 |
| 1998 | 3,009 | 173 | 887 | 4,069 |
| 1999 | 3,151 | 144 | 1,562 | 4,857 |
| 2000 | 3,005 | 203 | 1,103 | 4,311 |
| 2001 | 3,053 | 404 | 1,217 | 4,674 |
| 2002 | 2,937 | 1,056 | 1,718 | 5,711 |
| 2003 | 2,531 | 1,181 | 2,477 | 6,189 |

Production for the table was 6,189 tonnes, an increase of 478 tonnes ( $8.4 \%$ ) over the 2002 total and accounted for $87.4 \%$ of the total rainbow trout production, an increase in the proportion to that produced in 2002. There was an increase in the supply of fish weighing more than 450 g , encompassing $59 \%$ of total production for the table.

Table 1c: Production (tonnes) for the restocking trade during 1994-2003 according to weight category

| Year | $<450 \mathrm{~g}$ | $450-900 \mathrm{~g}$ | $>900 \mathrm{~g}$ | Total |
| :---: | :---: | :---: | :---: | :---: |
|  | $« 1 \mathrm{lb}$ | $1-2 \mathrm{lbs}$ | $>2 \mathrm{lbs}$ | Tonnes |
| 1994 | 125 | 337 | 99 | 561 |
| 1995 | 107 | 411 | 81 | 599 |
| 1996 | 188 | 484 | 74 | 746 |
| 1997 | 97 | 589 | 119 | 805 |
| 1998 | 69 | 538 | 237 | 844 |
| 1999 | 237 | 553 | 187 | 977 |
| 2000 | 41 | 609 | 193 | 843 |
| 2001 | 18 | 526 | 248 | 792 |
| 2002 | 28 | 484 | 436 | 948 |
| 2003 | 63 | 490 | 343 | 896 |

Production for the restocking of angling waters decreased in 2003 and accounted for $12.6 \%$ of total rainbow trout production in 2003. In 2003, production totalled 896 tonnes, a decrease of 52 tonnes (5.5\%) on the 2002 total. These figures represent the tonnage of fish supplied to angling waters for restocking purposes; they do not account for the catch taken by anglers.

## Escapes

There was one reported escape from a freshwater rainbow trout site in 2003 , involving the loss of 1,560 fish.

## Production by Site

Table 2: Numbers of sites grouped by tonnage produced during 1994-2003

| Year | Number of sites per production tonnage |  |  |  | Total number of sites |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | <1-25 | 26-100 | 101-200 | >200 |  |
| 1994 | 25 | 15 | 12 | 4 | 56 |
| 1995 | 26 | 15 | 13 | 5 | 59 |
| 1996 | 24 | 14 | 12 | 6 | 56 |
| 1997 | 19 | 22 | 12 | 4 | 57 |
| 1998 | 26 | 14 | 8 | 8 | 56 |
| 1999 | 18 | 14 | 8 | 9 | 49 |
| 2000 | 16 | 12 | 8 | 8 | 44 |
| 2001 | 17 | 12 | 6 | 10 | 45 |
| 2002 | 16 | 13 | 4 | 12 | 45 |
| 2003 | 17 | 9 | 6 | 11 | 43 |

Production was reported from 43 sites. The number of producers in the size brackets, 26-100 tonnes and $>200$ tonnes, decreased in 2003, while those producers in the size brackets, <1-25 tonnes and 101-200 tonnes increased. These figures do not include those sites specialising in the production of ova or young fish for ongrowing.

## Production by Method

Table 3: Grouping of rainbow trout sites by production tonnages, main method of production in 2003 and comparison with production in 2002

| Production method | Production grouping (tonnes) in 2003 |  |  |  |  | Total tonnage and (\%) by method |  | Number of sites |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | <10 | 10-25 | 26-50 | 51-100 | >100 | 2002 | 2003 | 2002 | 2003 |
| FW cages | 0 | 2 | 0 | 0 | 7 | 3,462 (52) | 3,664 (51.8) | 9 | 9 |
| FW ponds and raceways | 2 | 10 | 3 | 5 | 7 | 2,194 (32.9) | 1,988 (28) | 30 | 27 |
| FW tanks and hatcheries | 3 | 0 | 1 | 0 | 0 | 6 (0.1) | 42 (0.6) | 3 | 4 |
| SW cages | 0 | 0 | 0 | 0 | 3 | 997 (15) | 1,391 (19.6) | 3 | 3 |
| SW tanks | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| Total | 5 | 12 | 4 | 5 | 17 | 6,659 | 7,085 | 45 | 43 |

Freshwater production accounted for 5,694 tonnes (80.4\%) and seawater production for the remaining 1,391 tonnes (19.6\%). The main rearing facilities were freshwater cages, ponds and raceways. There was an increase in production in freshwater tanks and seawater cages, but no production in seawater tanks.

## Company and Site Data

Table 4: Number of companies and sites in production during 1991-2003

| Year | No. of companies | No. of sites |
| :---: | :---: | :---: |
| 1991 | 56 | 69 |
| 1992 | 53 | 72 |
| 1993 | 52 | 74 |
| 1994 | 56 | 72 |
| 1995 | 54 | 69 |
| 1996 | 52 | 69 |
| 1997 | 51 | 69 |
| 1998 | 51 | 71 |
| 1999 | 54 | 68 |
| 2000 | 54 | 63 |
| 2001 | 50 | 57 |
| 2002 | 39 | 57 |
| 2003 | 37 | 56 |

The number of companies registered with the Scottish Executive as being actively engaged in rainbow trout production was 37 in 2003. The number of sites registered and in production during 2003 was 56.

## Staffing and Productivity

Table 5: Number of staff employed and productivity per person during 1991-2003

| Year | Full-time | Part-time | Total | Productivity <br> (tonnes/person) |
| :---: | :---: | :---: | :---: | :---: |
| 1991 | 133 | 51 | 184 | 18.1 |
| 1992 | 135 | 73 | 208 | 19.0 |
| 1993 | 134 | 73 | 207 | 19.4 |
| 1994 | 139 | 70 | 209 | 20.4 |
| 1995 | 132 | 64 | 196 | 23.9 |
| 1996 | 129 | 60 | 189 | 24.5 |
| 1997 | 130 | 52 | 182 | 25.6 |
| 1998 | 137 | 49 | 186 | 26.4 |
| 1999 | 126 | 51 | 177 | 33.0 |
| 2000 | 121 | 47 | 168 | 30.7 |
| 2001 | 118 | 41 | 159 | 34.4 |
| 2002 | 114 | 46 | 160 | 41.6 |
| 2003 | 107 | 41 | 148 | 47.9 |

The overall number of staff employed in 2003 decreased by twelve to 148 . The number of full-time staff decreased by seven and the number of part-time employees decreased by five.

Productivity, measured as tonnes produced per person, increased by more than six tonnes per person in 2003. No distinction was made between full and part-time employees when calculating productivity.

## Production by Area

Table 6: Production and staffing by area in 2003

| Area | No. sites | Table <br> production <br> (tonnes) | Restocking <br> production <br> (tonnes) | Mean <br> tonnes <br> per site | Staffing |  |  | F/T |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | P/T | Total | Productivity |  |  |  |  |
| tonnes/person |  |  |  |  |  |  |  |  |

Productivity per site was greatest in the west, 232.9 tonnes per site, a reflection of some of the production being in sea water rather than fresh water in this area. Productivity per person was also greatest in the west, at 77.6 tonnes per person.

Figure 1: The Distribution of Active Rainbow Trout Sites 2003

## Type of Ova Laid Down

Table 7: Number (000s) and proportions (\%) of ova types laid down to hatch during 1993-2003

| Year | All female <br> diploid no.(\%) | Triploid no. (\%) | Mixed sex <br> diploid no. (\%) | Total ova |
| :---: | :---: | :---: | :---: | :---: |
| 1993 | $17,261(87)$ | $1,396(7)$ | $1,087(6)$ | 19,744 |
| 1994 | $18,105(92)$ | $1,134(6)$ | $365(2)$ | 19,604 |
| 1995 | $19,546(94)$ | $1,170(6)$ | $119((1)$ | 20,835 |
| 1996 | $21,308(94)$ | $935(4)$ | $435(2)$ | 22,678 |
| 1997 | $21,117(90)$ | $1,386(6)$ | $1,000(4)$ | 23,503 |
| 1998 | $23,222(92)$ | $1,515(6)$ | $504(2)$ | 25,241 |
| 1999 | $16,324(88)$ | $1,853(10)$ | $456(2)$ | 18,633 |
| 2000 | $17,264(82)$ | $1,202(6)$ | $2,513(12)$ | 20,979 |
| 2001 | $20,788(90)$ | $2,107(9)$ | $140(1)$ | 23,035 |
| 2002 | $19,733(89)$ | $1,822(8)$ | $570(3)$ | 22,125 |
| 2003 | $24,692(94)$ | $1,586(6)$ | $60(<1)$ | 26,338 |

## Source of Ova Laid Down

Table 8: Number (000s) and sources of ova laid down to hatch 1993-2003

| Year | Ova produced in Great Britain (GB) |  |  | Imported ova |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Own stock | Other stock | Total | Northern hemisphere | Southern hemisphere | Total |  |
| 1993 | 1,830 | 405 | 2,235 | 12,815 | 4,694 | 17,509 | 19,744 |
| 1994 | 479 | 625 | 1,104 | 13,055 | 5,445 | 18,500 | 19,604 |
| 1995 | 165 | 360 | 525 | 12,485 | 7,825 | 20,310 | 20,835 |
| 1996 | 420 | 988 | 1,408 | 13,247 | 8,023 | 21,270 | 22,678 |
| 1997 | 1,232 | 837 | 2,069 | 11,594 | 9,840 | 21,434 | 23,503 |
| 1998 | 2,559 | 60 | 2,619 | 11,038 | 11,595 | 22,633 | 25,252 |
| 1999 | 878 | 392 | 1,270 | 11,415 | 5,946 | 17,361 | 18,631 |
| 2000 | 1,397 | 900 | 2,297 | 10,161 | 8,525 | 18,686 | 20,983 |
| 2001 | 918 | 525 | 1,443 | 13,515 | 8,075 | 21,590 | 23,033 |
| 2002 | 530 | 200 | 730 | 12,385 | 9,010 | 21,395 | 22,125 |
| 2003 | 430 | 280 | 710 | 25,578 | 50 | 25,628 | 26,338 |

In 2003, the total number of eyed-ova laid down to hatch increased by over four million (19\%) on the 2002 figure. The proportion of ova from GB broodstock decreased to $2.7 \%$ of the total, and the rainbow trout industry remained reliant on imported ova. Data on importation of ova into Scotland are also available from the import licences and are shown in Table 9a. Any discrepancy between the figures in Table 8 and 9 a is due to data being obtained from two independent sources.

## Imports of Ova from Official Import Licences

Table 9a: Number (000s) and sources of ova imported into Scotland during 1996-2003

| Source | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| N. Ireland | 4,095 | 2,425 | 2,065 | 3,335 | 1,085 | 710 | - | - |
| Isle of Man | 4,182 | 4,205 | 3,273 | 4,222 | 5,842 | 6,670 | 6,775 | 6,855 |
| Denmark | 5,075 | 5,354 | 5,700 | 4,546 | 4,225 | 6,135 | 5,000 | 5,270 |
| South Africa | 8,023 | 9,450 | 11,585 | 6,036 | 7,762 | 8,075 | 7,750 | 50 |
| USA | - | - | - | - | - | - | 1,700 | 11,035 |
| France | - | - | - | - | - | - | - | 875 |
| Others (EU) | 220 | - | - | - | - | - | - | - |
| Totals | 21,595 | 21,434 | 22,623 | 18,139 | 18,914 | 21,590 | 21,225 | 24,085 |

Table 9b: Seasonal variation in numbers (000s) and sources of ova imported into Scotland during 2003

| Month | France | Isle of Man | Denmark | South Africa | USA |
| :--- | :---: | :---: | :---: | :---: | :---: |
| January | - | 1,200 | 600 | - | 135 |
| February | - | 900 | 400 | - | - |
| March | - | 1,150 | 1,385 | - | - |
| April | - | 620 | 685 | - | 1,000 |
| May | - | - | 900 | - | 510 |
| June | - | - | 200 | - | 1,105 |
| July | 250 | - | - | - | 3,230 |
| August | - | - | - | - | 2,135 |
| September | 200 | - | - | - | 1,165 |
| October | 425 | 2,585 | 800 | - | 1,440 |
| November | - | 6,855 | 5,270 | 50 | 11,035 |
| December | - |  |  | - | - |
| Totals | 875 |  | - |  |  |

There were no imports of ova from Northern Ireland during 2003. Suppliers within the EU accounted for $54 \%$ of ova imported into Scotland during 2003 and the USA accounted for $45.8 \%$. This resulted in an overall $99.8 \%$ of ova imported from the northern hemisphere countries ( $63.5 \%$ during 2002). There was a decrease in ova imported from South Africa, with only $0.2 \%$ of overall imports in 2003 compared to $36.5 \%$ overall in 2002. This decrease was due to marketing changes within the industry. To maintain their ability to regulate production throughout the year and produce a constant supply of fish for their markets, producers have had to rely upon supplies of out of season ova from stocks in the northern hemisphere. This accounts for the increase in imports from the USA and the introduction of imports from a new supplier in France.

## Trade in Fry and Fingerlings

Table 10: Number (000s) of fry and fingerlings traded during 1993-2003

| Year | Fry and fingerlings bought |  |  | Total number bought | Total number sold |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | All female diploid nos. (\%) | Triploid nos. (\%) | Mixed sex diploid nos. (\%) |  |  |
| 1993 | 8,395 (73) | 917 (8) | 2,239 (19) | 11,551 | 9,823 |
| 1994 | 9,854 (90) | 1,017 (9) | 47 (<1) | 10,918 | 10,379 |
| 1995 | 12,449 (95) | 683 (5) | 0 | 13,132 | 10,912 |
| 1996 | 12,174 (93) | 572 (4) | 283 (2) | 13,029 | 11,578 |
| 1997 | 15,028 (94) | 889 (5) | 98 (1) | 16,015 | 10,330 |
| 1998 | 13,035 (96) | 410 (3) | 80 (1) | 13,525 | 11,000 |
| 1999 | 11,264 (94) | 90 (1) | 616 (5) | 11,970 | 9,759 |
| 2000 | 13,410 (92) | 287 (2) | 892 (6) | 14,589 | 12,505 |
| 2001 | 16,065 (96) | 685 (4) | 0 | 16,750 | 13,961 |
| 2002 | 10,031 (88) | 670 (6) | 667 (6) | 11,368 | 10,101 |
| 2003 | 17,500 (94) | 1,007 (5) | 193 (1) | 18,700 | 17,451 |

The established trade between hatcheries and on-growing farms continued in 2003. Some companies specialised in the production of fry and fingerlings. The total number of fry and fingerlings purchased by producers increased by $64 \%$, whilst the total number sold by producers increased by $73 \%$. The disparity between supply and demand is met by supplies being bought from England, Wales and Northern Ireland. The shortage in supply was lower than that seen in 2002.

## Use of Vaccines

Table 11: Number of sites rearing fish vaccinated against enteric redmouth disease (ERM) during 1992-2003

| Year | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> sites | 33 | 28 | 35 | 31 | 33 | 35 | 31 | 40 | 35 | 33 | 34 | 38 |

Vaccines continued to be widely used as a preventative treatment against ERM, a potentially serious bacterial disease, caused by the bacterium Yersinia ruckeri. A total of 32.9 million fish were vaccinated. Vaccination is generally carried out as a bath treatment at the fingerling stage although some vaccines were administered by intra-peritoneal injection.

## 2. ATLANTIC SALMON (Salmo salar) - OVA AND SMOLTS

Annual production surveys were sent to all 48 companies registered with the Scottish Executive as being actively engaged in the freshwater production of Atlantic salmon in Scotland during 2003. Returns were received from all companies, covering the 176 sites currently in production.

## Company and Site Data

Table 12: Number of companies and sites in production during 1995-2003 ${ }^{\text {c }}$

| Year | No. of companies | No. of sites |
| :---: | :---: | :---: |
| 1995 | 69 | 162 |
| 1996 | 67 | 166 |
| 1997 | 65 | 171 |
| 1998 | 64 | 177 |
| 1999 | 65 | 189 |
| 2000 | 60 | 184 |
| 2001 | 56 | 169 |
| 2002 | 55 | 173 |
| 2003 | 48 | 176 |

In 2003 the number of companies registered with the Scottish Executive as being actively engaged in the freshwater production of Atlantic salmon decreased by seven to 48. A total of 278 freshwater sites were registered and of these 98 sites were inactive and 180 active. One hundred and seventy six of the active sites were in commercial production, the difference being accounted for by farms that were not used during 2003.

## Production and Staffing

Table 13: Number (000s) of smolts produced, staff employed and smolt productivity during 1993-2003

| Year | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number (000s) of <br> smolts produced | 21,043 | 23,117 | 26,539 | 33,619 | 38,187 | 44,853 | 39,763 | 45,583 | 47,546 | 47,161 | 44,414 |
| StaffingFull- <br> time <br> Part- <br> time <br> Total | 233 | 245 | 279 | 308 | 344 | 318 | 300 | 341 | 317 | 312 | 291 |
|  | 115 | 133 | 117 | 133 | 166 | 96 | 124 | 103 | 111 | 93 | 82 |
| Productivity, <br> 000s of smolts <br> per person | 60.5 | 61.2 | 67.0 | 76.2 | 74.9 | 108.3 | 93.8 | 102.7 | 111.1 | 116.4 | 119.1 |

Smolt production in 2003 decreased by over 2.7 million, a decrease of $5.8 \%$ compared to 2002.

[^1]The number of staff employed decreased by 32 and productivity increased by $2 \%$, to a figure of 119,100 smolts produced per employee.

## Escapes

There was one reported escape from a freshwater Atlantic salmon site in 2003, involving the loss of 47,176 fish.

## Smolts by Age Group

Table 14: Number of smolts (000s) produced by type during 1993-2003

| Year | $\mathrm{S} 1 / 2$ | S 1 | $\mathrm{~S} 11 / 2$ | S 2 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1993 | 686 | 19,698 | 202 | 457 | 21,043 |
| 1994 | 1,672 | 20,712 | 511 | 222 | 23,117 |
| 1995 | 2,663 | 22,705 | 365 | 806 | 26,539 |
| 1996 | 6,298 | 26,334 | 523 | 464 | 33,619 |
| 1997 | 9,333 | 27,679 | 692 | 483 | 38,187 |
| 1998 | 8,478 | 35,383 | 686 | 306 | 44,853 |
| 1999 | 10,770 | 28,345 | 586 | 62 | 39,763 |
| 2000 | 11,841 | 33,722 | 0 | 20 | 45,583 |
| 2001 | 14,684 | 32,732 | 110 | 20 | 47,546 |
| 2002 | 15,791 | 30,527 | 843 | 0 | 47,161 |
| 2003 | 14,907 | 28,836 | 671 | 0 | 44,414 |

In 2003 production was dominated by S1 smolts, although numbers produced decreased by $6 \%$. The production of $\mathrm{S} 1 / 2$ smolts decreased by $6 \%$. There was also a decrease in the production of S1 $1 / 2$, while no S2 smolts were produced.

## Production Systems

Table 15: Number and capacity of production systems during 1999-2003

| System | No. of sites with system |  |  |  |  | Total capacity, 000s cubic metres |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year | 1999 | 2000 | 2001 | 2002 | 2003 | 1999 | 2000 | 2001 | 2002 | 2003 |
| Cages | 86 | 85 | 76 | 81 | 80 | 457 | 344 | 328 | 409 | 391 |
| Tanks and <br> Raceways | 103 | 99 | 93 | 92 | 96 | 39 | 45 | 48 | 41 | 40 |
| Total | 189 | 184 | 169 | 173 | 176 | 496 | 389 | 376 | 450 | 431 |

There are two principal types of facility used for the production of smolts in fresh water - tanks and cages. In 2003, the number of farms employing tanks, ponds and raceways increased by four, and the number of farms employing cages decreased by one. In terms of volume, tank capacity decreased by $1,000 \mathrm{~m}^{3}$, and cage volume decreased by $18,000 \mathrm{~m}^{3}$. This resulted in a net decrease in volume of $19,000 \mathrm{~m}^{3}$ available for the production of smolts in Scotland during 2003.

Table 16: Number (000s) of smolts produced and stocking densities by production system during 1999-2003

|  | Number of smolts produced (000s) |  |  |  |  | Stocking densities(smolts /m') |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year | 1999 | 2000 | 2001 | 2002 | 2003 | 1999 | 2000 | 2001 | 2002 | 2003 |
| Cages | 22,242 | 24,052 | 25,237 | 27,076 | 24,094 | 49 | 70 | 77 | 66 | 62 |
| All others | 17,521 | 21,531 | 22,309 | 20,085 | 20,320 | 449 | 478 | 465 | 490 | 508 |
| Total | 39,763 | 45,583 | 47,546 | 47,161 | 44,414 | - | - | - | - | - |

The average stocking densities of cages decreased compared to 2002, whilst the stocking densities of tanks increased; in the case of cages from 66 to 62 fish per $\mathrm{m}^{3}$ and in the case of tanks, from 490 to 508 fish per $\mathrm{m}^{3}$.

## Ova Production

Table 17: Number (000s) of salmon ova produced during 1996-2003

| Year | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of ova | 122,665 | 186,470 | 151,841 | 122,649 | 124,619 | 99,921 | 107,996 | 115,569 |

Over one hundred and fifteen million ova were stripped in 2003, an increase of over seven million (7\%) on the 2002 season.

Table 18: Source, number (000s) and previous year's estimate of ova laid down to hatch during 1993-2004

| Year | In-house <br> broodstock | Out-sourced GB <br> broodstock | GB wild <br> broodstock | Foreign <br> ova | Total | Previous <br> year's <br> estimate |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1993 | 44,524 | 19,281 | 514 | 4,381 | 68,700 | 54,415 |
| 1994 | 25,883 | 14,991 | 450 | 5,347 | 46,671 | 49,064 |
| 1995 | 37,176 | 25,063 | 475 | 2,160 | 64,874 | 46,538 |
| 1996 | 46,545 | 23,784 | 65 | 8,045 | 78,439 | 71,635 |
| 1997 | 60,421 | 23,308 | 323 | 1,750 | 85,802 | 76,629 |
| 1998 | 49,207 | 19,085 | 0 | 1,010 | 69,302 | 69,632 |
| 1999 | 52,122 | 25,804 | 4,291 | 500 | 82,717 | 68,644 |
| 2000 | 38,674 | 33,592 | 1,605 | 4,660 | 78,531 | 69,220 |
| 2001 | 40,086 | 32,002 | 615 | 10,720 | 83,423 | 83,458 |
| 2002 | 40,732 | 30,664 | 120 | 15,184 | 86,700 | 80,679 |
| 2003 | 38,766 | 21,138 | 0 | 20,822 | 80,726 | 73,193 |
| 2004 | - | - | - | - | - | 74,464 |

The number of ova laid down to hatch was 80.7 million, a decrease of almost six million (6.9\%) on the 2002 figure. The majority of the ova ( $48 \%$ ) were derived from producers' own broodstock, the proportion being slightly more than that seen in 2002. Supplies from other producer's broodstock were proportionally smaller, with an increasing proportion being derived from sources outside Great Britain. Producers' estimates for the number of ova to be laid down in 2004 shows a projected decrease compared to the actual number of ova laid down in 2003. No ova derived from wild stocks were laid down to hatch in 2003.

Smolts Produced and Put to Sea
Table 19: Actual and projected smolt production and smolts put to sea (millions) during 1994-2005

|  | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Actual smolts <br> put to sea | 22.0 | 26.8 | 30.8 | 42.8 | 45.9 | 41.1 | 45.2 | 48.6 | 50.1 | 43.8 |  |  |
| Smolts <br> produced | 23.1 | 26.5 | 33.6 | 38.2 | 44.8 | 39.8 | 45.6 | 47.5 | 47.2 | 44.4 |  |  |
| Estimated <br> production | 22.1 | 25.2 | 31.8 | 41.6 | 45.3 | 49.6 | 42.1 | 50.2 | 49.3 | 44.2 | 40.0 | 46.0 |
| Ratio of ova <br> laid down to <br> smolts <br> produced | 2.0 | 2.4 | 2.3 | 2.2 | 1.5 | 1.7 | 1.8 | 1.8 | 1.8 | 1.8 |  |  |

The figure for the number of smolts put to sea includes smolts produced in England and fish imported from elsewhere whereas smolt production data relate only to those produced in Scotland. Any discrepancy may be due to smolts that were produced in Scotland but were not put to sea in Scotland. Farmers estimate putting 40.0 million smolts to sea in 2004.

The ratio of ova laid down to hatch to smolts produced in 2003 remained similar to the ratio in 2002.

## Scale of Production

Table 20: Smolt producing sites grouped by numbers (000s) of smolts produced during 1991-2003

| Year | Scale of production |  |  |  |  |  |  |  | No. of sites in production | Total smolts produced |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1-10 | 11-25 | 26-50 | $\begin{aligned} & 51- \\ & 100 \end{aligned}$ | $\begin{aligned} & 101- \\ & 250 \end{aligned}$ | $\begin{gathered} 251- \\ 500 \end{gathered}$ | $\begin{gathered} 501- \\ 1,000 \end{gathered}$ | >1,000 |  |  |
| 1991 | 2 | 11 | 17 | 22 | 26 | 26 | 5 | 2 | 111 | 22,404 |
| 1992 | 3 | 8 | 14 | 17 | 41 | 23 | 4 | 0 | 110 | 20,828 |
| 1993 | 1 | 9 | 15 | 17 | 32 | 21 | 9 | 0 | 104 | 21,043 |
| 1994 | 4 | 5 | 13 | 24 | 37 | 17 | 13 | 0 | 113 | 23,117 |
| 1995 | 1 | 6 | 15 | 29 | 30 | 26 | 14 | 1 | 122 | 26,540 |
| 1996 | 1 | 7 | 13 | 29 | 33 | 26 | 17 | 3 | 129 | 33,619 |
| 1997 | 0 | 3 | 13 | 22 | 39 | 24 | 18 | 6 | 125 | 38,187 |
| 1998 | 1 | 3 | 12 | 24 | 33 | 29 | 20 | 8 | 130 | 44,853 |
| 1999 | 1 | 1 | 15 | 25 | 29 | 24 | 21 | 7 | 123 | 39,763 |
| 2000 | 1 | 2 | 10 | 17 | 36 | 24 | 24 | 9 | 123 | 45,583 |
| 2001 | 0 | 1 | 7 | 19 | 30 | 26 | 13 | 14 | 110 | 47,546 |
| 2002 | 1 | 1 | 11 | 17 | 29 | 34 | 17 | 10 | 120 | 47,161 |
| 2003 | 2 | 0 | 7 | 20 | 32 | 31 | 12 | 10 | 114 | 44,414 |

Note: These data refer only to sites producing smolts. The sites holding only ova, fry or parr are excluded.

There has been a decrease in the number of sites producing smolts since 2002. The number of sites producing less than 101,000 smolts has decreased by one, and there has been a decrease of five in the number of sites producing more than 100,000 smolts. The number of sites producing in excess of one million smolts per year remained the same, and a decrease in the number of sites producing between 501,000 and one million smolts
per year. This drop in the number of sites producing smolts has resulted in an overall decrease in smolts produced.

## Production of Ova and Smolt by Production Area

Table 21: Staffing, and ova laid down to hatch, 2002-2003, smolt production 2002-2003 and projected production 2004-2005 by region

| Region | Number of staff employed in 2003 |  | Ova laid down to hatch (000s) |  | Smolt production (000s) |  | Estimated smolt production (000s) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | F/T | P/T | 2002 | 2003 | 2002 | 2003 | 2004 | 2005 |
| Northwest | 136 | 30 | 49,760 | 48,363 | 23,295 | 23,448 | 19,834 | 21,983 |
| Orkney | 7 | 7 | 700 | 200 | 681 | 682 | 694 | 844 |
| Shetland | 16 | 13 | 3,938 | 2,520 | 1,449 | 1,468 | 2,330 | 2,400 |
| West | 58 | 19 | 13,809 | 13,370 | 9,155 | 9,548 | 9,174 | 10,160 |
| Western Isles | 64 | 8 | 14,612 | 13,315 | 9,906 | 7,092 | 6,071 | 8,444 |
| East and South | 10 | 5 | 3,881 | 2,958 | 2,675 | 2,176 | 1,928 | 2,210 |
| All Scotland | 291 | 82 | 86,700 | 80,726 | 47,161 | 44,414 | 40,031 | 46,041 |

The north west, west and the Western Isles were the main ova and smolt producing areas in 2003, and employed the greatest number of staff.

## International Trade in Ova

Since the introduction of the EU single market on 1 January 1993 and the associated Fish Health Regulations common to all EU member states, a trade in live salmon and ova has been established.

In addition, the European Economic Area (EEA) Agreement allows trade between the EU and the member states of the European Free Trade Association (EFTA). Until 2003, trade under the EEA Agreement, was restricted to halibut alevins and salmonid eggs or gametes. With the cessation of these restrictions, trade became based on the same rules as are established within the EU, regarding approval of farms and zones for listed diseases. Norway has an equivalent status to Great Britain with regard to List II diseases, but protective measures in place against infectious salmon anaemia (ISA) and Gyrodactylus salaris have prevented trade. Changes introduced to these protective measures in 2003 mean the importation of salmonid ova is permitted from Norway.

Trade with Third Countries has also been established, but imports are permitted only under licence, from sources that have met rigorous health testing requirements. Exports to countries outside the EU are subject to the health conditions placed by the importing country. FRS advises potential exporters to ascertain with the importing country any specific health testing requirements that may be a condition of import.

Figure 2: The Distribution of Active Smolt Sites 2003

## Imports and Exports

Table 22a: Source and number (000s) of ova, parr and smolts imported during 1993-2003 derived from import licences

| Import Year | Ova |  |  |  |  |  | Parr and Smolts |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Member States | EFTA |  | Third Countries |  | Total | EU Member |
|  |  | Iceland | Norway | Australia | USA |  | States |
| 1993 | 4,439 | - | - | 470 | - | 4,909 | - |
| 1994 | 5,823 | - | - | 240 | - | 6,063 | 72 |
| 1995 | 1,470 | - | - | 600 | - | 2,070 | 2,902 |
| 1996 | 6,690 | - | - | 1,355 | - | 8,045 | 2,849 |
| 1997 | 2,305 | - | - | 1,200 | - | 3,505 | 2,168 |
| 1998 | 260 | - | - | 750 | - | 1,010 | 2,140 |
| 1999 | 244 | - | - | 500 | - | 744 | 900 |
| 2000 | 0 | 4,610 | - | 500 | - | 5,110 | 3,436 |
| 2001 | 8,173 | 10,833 | - | 1,620 | - | 20,626 | 2,475 |
| 2002 | 8,650 | 11,623 | - | 1,800 | 500 | 22,573 | 2,879 |
| 2003 | 7,820 | 9,518 | 2,900 | 550 | 400 | 21,188 | 2,570 |

Table 22b: Destination and number (000s) of salmon ova exported during 1994-2003 derived from export certificates

| Export year | Farmed origin |  |  | Total | Wild origin total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Chile | EU | Others |  |  |
|  | 15,691 | 6,740 | 40 | 22,471 | 350 |
| 1995 | 19,542 | 7,770 | 40 | 27,352 | 450 |
| 1996 | 19,720 | 20,445 | 20 | 40,185 | 435 |
| 1997 | 44,810 | 12,525 | 0 | 57,335 | 270 |
| 1998 | 23,375 | 4,459 | 20 | 27,754 | 492 |
| 1999 | 16,880 | 13,054 | 0 | 29,934 | 52 |
| 2000 | 9,740 | 25,311 | 0 | 35,051 | 50 |
| 2001 | 2,675 | 8,542 | 0 | 11,217 | 0 |
| 2002 | 1,600 | 6,627 | 0 | 8,227 | 0 |
| 2003 | 0 | 2,171 | 0 | 2,171 | 0 |

The numbers of ova imported decreased by 6\%. This is related to the decrease in ova laid down to hatch during 2003. The number of parr imported decreased.

In 2003 a total of 2.2 million ova were exported. Exports to other EU member states decreased by $67 \%$ to 2.2 million. There were no exports to Chile during 2003. Overall, exports were down by 74\% based on the 2002 figure.

## Vaccines

Table 23: Number of sites using vaccines 1995-2003 and number (million) of fish vaccinated during 1995-2003

| Year | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of sites | 102 | 112 | 118 | 122 | 115 | 114 | 106 | 108 | 104 |
| No of fish vaccinated | 25.3 | 31.8 | 39.7 | 43.7 | 43.9 | 45.8 | 51.3 | 47.5 | 41.7 |

Vaccines were used to provide protection against furunculosis, a disease caused by the bacterium Aeromonas salmonicida, which was the cause of serious losses within the fish farming industry in the late 1980s and early 1990s. Vaccination is normally carried out at the pre-smolt stage by intra-peritoneal injection. In addition, some sites vaccinated fish against enteric redmouth disease (ERM), infectious pancreatic necrosis virus (IPNv) and Vibrio spp. bacteria.

## 3. ATLANTIC SALMON - PRODUCTION

## Production

Production survey information was collected from all 81 companies actively involved in Atlantic salmon production, farming 326 active sites. This figure represents the entire industry operating in Scotland.

Table 24: Annual production of Atlantic salmon (tonnes) during 1986-2003 and projected production in 2004

| Year | Tonnes | Percentage <br> difference | Year | Tonnes | Percentage <br> difference |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1986 | 10,337 | - | 1996 | 83,121 | 19 |
| 1987 | 12,721 | 23 | 1997 | 99,197 | 19 |
| 1988 | 17,951 | 41 | 1998 | 110,784 | 12 |
| 1989 | 28,553 | 59 | 1999 | 126,686 | 14 |
| 1990 | 32,351 | 13 | 2000 | 128,959 | 2 |
| 1991 | 40,593 | 25 | 2001 | 138,519 | 7 |
| 1992 | 36,101 | -11 | 2002 | 144,589 | 4 |
| 1993 | 48,691 | 35 | 2003 | 169,736 | 17 |
| 1994 | 64,066 | 32 | 2004 | $162,298 *$ | - |
| 1995 | 70,060 | 9 |  |  |  |

*farmers' estimate of projected tonnage based on stocks currently being on-grown

The total production of Atlantic salmon during 2003 was 169,736 tonnes, an increase of 25,147 tonnes (17\%) on 2002 production. This is the eleventh consecutive annual increase in production. The total production for 2002 has been altered compared to previous reports. This is due to data having been reassessed and updated where necessary.

## Escapes

There were thirteen reported escapes from seawater Atlantic salmon sites in 2003, involving the loss of 104,261 fish.

Table 25: Number (000s) and production (tonnes) of salmon harvested and mean fish weight (kg) per year class during 1994-2003

|  | Year of smolt input | Year of harvest | Number (000s) | Production (tonnes) | Mean weight at harvest (kg) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Harvest in year 0 (i.e. in year of input) | 1994 | 1994 | 261 | 388 | 1.5 |
|  | 1995 | 1995 | 207 | 369 | 1.8 |
|  | 1996 | 1996 | 315 | 638 | 2.0 |
|  | 1997 | 1997 | 282 | 585 | 2.1 |

## Survival and Production in Smolt Year Classes

Table 28: Survival and production in smolt year classes during 1990-2003

| Year of smolt input | Smolt input (000s) | Harvest year 0 |  |  |  | Harvest year 1 |  |  |  | Harvest year 2 |  |  |  | Total \% of year class harvested | Year class weight (tonnes) | Yield per smolt (kg) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Number (000s) | Weight (tonnes) | Mean weight (kg) | \% harvested | Number (000s) | Weight <br> (tonnes) | Mean weight (kg) | \% harvest | Number (000s) | Weight (tonnes) | Mean weight (kg) | \% harvest |  |  |  |
| 1990 | 21,408 | - | - | - | - | 8,877 | 21,026 | 2.4 | 41.5 | 4,315 | 14,728 | 3.4 | 20.1 | 61.6 | 35,754 | 1.67 |
| 1991 | 20,227 | - | - | - | - | 8,864 | 21,373 | 2.4 | 43.8 | 4,675 | 15,875 | 3.4 | 23.1 | 66.9 | 37,248 | 1.84 |
| 1992 | 20,527 | - | - | - | - | 11,102 | 32,738 | 3.0 | 54.1 | 5,096 | 21,812 | 4.3 | 24.8 | 78.9 | 54,550 | 2.65 |
| 1993 | 20,541 | 46 | 78 | 1.7 | 0.2 | 13,446 | 41,865 | 3.1 | 65.5 | 5,135 | 21,916 | 4.2 | 25.0 | 90.7 | 63,859 | 3.10 |
| 1994 | 21,953 | 260 | 388 | 1.5 | 1.2 | 14,420 | 47,775 | 3.3 | 65.7 | 5,408 | 24,485 | 4.5 | 24.6 | 91.5 | 72,629 | 3.31 |
| 1995 | 26,786 | 206 | 269 | 1.8 | 0.8 | 17,132 | 57,998 | 3.4 | 64.0 | 6,195 | 27,263 | 4.4 | 23.1 | 87.8 | 85,530 | 3.19 |
| 1996 | 32,906 | 315 | 638 | 2.0 | 1.9 | 20,245 | 71,349 | 3.5 | 61.5 | 5,148 | 21,953 | 4.3 | 15.6 | 78.1 | 93,940 | 2.85 |
| 1997 | 42,766 | 282 | 585 | 2.1 | 0.7 | 29,014 | 86,783 | 3.0 | 67.8 | 9,027 | 40,098 | 4.4 | 21.1 | 89.6 | 127,466 | 2.98 |
| 1998 | 45,870 | 696 | 2,048 | 2.9 | 1.5 | 22,556 | 83,823 | 3.7 | 49.2 | 8,450 | 36,323 | 4.3 | 18.4 | 69.1 | 122,194 | 2.66 |
| 1999 | 41,106 | 1,000 | 2,763 | 2.8 | 2.4 | 23,077 | 89,963 | 3.9 | 56.1 | 9,096 | 40,754 | 4.5 | 22.1 | 80.6 | 133,480 | 3.25 |
| 2000 | 45,185 | 765 | 2,673 | 3.5 | 1.7 | 22,726 | 96,539 | 4.2 | 50.3 | 11,354 | 53,535 | 4.7 | 25.1 | 77.1 | 152,747 | 3.38 |
| 2001 | 48,643 | 557 | 1,227 | 2.2 | 1.1 | 23,528 | 90,230 | 3.8 | 48.4 | 15,619 | 73,255 | 4.7 | 32.1 | 81.6 | 164,712 | 3.39 |
| 2002 | 50,086 | 272 | 824 | 3.0 | 0.5 | 22,602 | 96,205 | 4.3 | 45.1 |  |  |  |  |  |  |  |
| 2003 | 43,083 | 82 | 276 | 3.4 | 0.2 |  |  |  |  |  |  |  |  |  |  |  |

In 2001, the last year for which survival can be calculated, the survival rate from smolt input to harvest was $81.6 \%$. The 2001 year class displayed a higher survival rate than that seen in 2000 and also higher than the survival averaged over the last 12 year-classes.

Of the 2002 year class, $45.6 \%$ of the input has been harvested, approximately $3.9 \%$ fewer than the average harvest of fish one year after input in the 2001 year class. The average weight increased by 0.5 kg to 4.3 kg . This may indicate an increased harvest in 2004 of two sea winter (2SW) fish, or a decrease in the survival rate of the year class as a whole.

In 2003, the harvest of fish from the 2003 smolt input was $0.2 \%$, a further decrease compared with the proportion of fish harvested from the same year class in recent years.

## Smolts to Sea

Table 29: Number (000s) and origin of smolts put to sea during 1993-2003

| Year | Smolts put to sea (000s) |  |  |  | $\begin{gathered} \text { Total } \\ (000 \mathrm{~s}) \end{gathered}$ | Scottish Origin | English Origin |  | Other Origin |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 2003 | 14,534 | 28,283 | 986 | 0 | 43,803 | 93 | 2,590 | 6 | 325 | >1 |

The total number of smolts put to sea in 2003 was almost 44 million. The smolt input comprised mainly S1 smolts ( $65 \%$ ), and the proportion of photoperiod adjusted fish ( $\mathrm{S} 1 / 2$ smolts and $\mathrm{S} 11 / 2$ smolts) input remained constant at $35 \%$. Approximately $7 \%$ of smolts input into Scottish salmon farms were sourced from outwith Scotland. This is a slight increase compared with the proportion observed in 2002.

## Survival and Production in Smolt Year Classes by Production Area

Table 30: Number (000s) of smolts put to sea and year class survival by area during 1992-2003

| Region | Smolts put to sea (000s) |  | Harvest in year 0 |  |  | Harvest in year 1 |  |  | Harvest in year 2 |  |  | Total Harvest (=survival) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Figure 3: The Distribution of Active Salmon Production Sites 2003

## Staffing

Table 31: Number of staff employed in salmon production during 1993-2003

| Year |  | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Staff $\quad$ F/T | 976 | 1,003 | 1,104 | 1,150 | 1,088 | 1,117 | 1,036 | 1,141 | 1,066 | 1,083 | 1,066 |
|  | P/T | 248 | 242 | 251 | 241 | 207 | 192 | 268 | 256 | 191 | 223 |

The total number of staff employed in salmon production in 2003 was 1,217 a decrease of 89 . The staffing figures collected refer specifically to the production of salmon and do not include figures for staff involved with processing or marketing activities. Productivity increased to 139.5 tonnes production per person.

## Production Methods

Table 32: Production methods, capacity, tonnage and average stocking densities (kg/m³) during 2001-2003

| Method | Number of sites |  |  | Total capacity (000s cubic metres) |  |  | Production (tonnes) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2001 | 2002 | 2003 | 2001 | 2002 | 2003 | 2001 | 2002 | 2003 |
| Seawater tanks | 2 | 2 | 1 | 15.5 | 15.5 | 5.5 | 232 | 330 | 0 |
| Seawater cages | 318 | 326 | 325 | 14,893 | 15,374 | 15,632 | 138,287 | 144,259 | 169,736 |
| For cage sites:ratio of production ( Kg ) to cage capacity $\left(\mathrm{m}^{3}\right)$ |  |  |  |  |  |  | 9.3 | 9.4 | 10.9 |

All of the fish were produced in seawater cages. The fact that there was no production from seawater tank sites in 2003 reflects the continued high installation and running costs incurred in operating seawater tank systems. Thirty one active seawater tank sites were registered in Scotland and none were actively producing salmon. Most seawater tank capacity has now been re-deployed for the production of other species or salmon broodstock.

Sea cage capacity increased by $258,000 \mathrm{~m}^{3}$ in 2003 , reflecting the rise in the size of sites in production. Production efficiency in cages, measured as the ratio of fish weight in kilograms produced per cubic metre, increased by 1.5 kg in 2003. In cage sites, the ratio of production, expressed in kilograms, to cage capacity, expressed in cubic metres, was 9.3, 9.4 and 10.9 in 2001, 2002 and 2003 respectively. This indicates that on average across all production stages in any year, the stocking density is less than 10 kilograms per cubic metre.

## Scale of Production by Site

Table 33: Number of sites shown in relation to their production grouping and percentage share of production 1994-2003

| Production grouping (tonnes) |  | 0 | 1-50 | 51-100 | $\begin{aligned} & 101- \\ & 200 \end{aligned}$ | $\begin{gathered} 201- \\ 500 \end{gathered}$ | $\begin{gathered} 501- \\ 1,000 \end{gathered}$ | >1,000 | Total |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Sites* |  |  |  |  |  |  | Tonnes |
|  |  |  |  |  |  |  |  |  |  |

|  | 2003 | 125 | 6 | 14 | 13 | 53 | 45 | 70 | 326 | 169,736 |
| \% share of production | 1994 | 0 | 1 | 4 | 12 | 33 | 31 | 19 | - | - |
|  | 1995 | 0 | 1 | 2 | 8 | 31 | 32 | 26 | - | - |
|  | 1996 | 0 | 1 | 3 | 9 | 26 | 22 | 39 | - | - |
|  | 1997 | 0 | 1 | 2 | 6 | 20 | 28 | 43 | - | - |
|  | 1998 | 0 | 1 | 1 | 4 | 21 | 23 | 50 | - | - |
|  | 1999 | 0 | 1 | 1 | 2 | 13 | 24 | 59 | - | - |
|  | 2000 | 0 | 0.6 | 1.4 | 1.9 | 10.9 | 25.1 | 60.5 | - | - |
|  | 2001 | 0 | 0.2 | 0.2 | 2.9 | 10.0 | 20.8 | 65.9 | - | - |
|  | 2002 | 0 | 0.2 | 0.5 | 2.7 | 12.8 | 26.5 | 57.3 | - | - |
|  | 2003 | 0 | 0.1 | 0.6 | 1.2 | 10.4 | 19.7 | 68 | - | - |

*Includes farms stocked but having no production.

In 2003, there was a decrease of four in the number of sites producing less than 50 tonnes and an increase of 19 in those sites producing over 1,000 tonnes. This trend toward large sites has been continuing over several years.

## Company Productivity

Table 34: Number of companies grouped by production (tonnes), manpower and productivity (tonnes per person) during 2002-2003

| Total Tonnage |  | 0-100 | $\begin{aligned} & 101- \\ & 200 \\ & \hline \end{aligned}$ | $\begin{aligned} & 201- \\ & 400 \\ & \hline \end{aligned}$ | $\begin{aligned} & 401- \\ & 700 \\ & \hline \end{aligned}$ | $\begin{gathered} 701- \\ 1,000 \\ \hline \end{gathered}$ | $\begin{aligned} & 1,001- \\ & 2,000 \\ & \hline \end{aligned}$ | 12,000 | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No of Companies | 2002 | 24 | 4 | 11 | 9 | 7 | 14 | 15 | 84 |
|  | 2003 | 23 | 1 | 6 | 6 | 6 | 20 | 19 | 81 |
| No of tonnes | 2002 | 346 | 650 | 3,464 | 4,898 | 6,215 | 18,892 | 110,124 | 144,589 |
|  | 2003 | 322 | 151 | 1,605 | 3,183 | 4,958 | 29,426 | 130,091 | 169,736 |
| Manpower (total) | 2002 | 49 | 19 | 69 | 56 | 103 | 167 | 843 | 1,306 |
|  | 2003 | 42 | 5 | 25 | 23 | 36 | 165 | 921 | 1,217 |
| Productivity (tonnes/person) | 2002 | 7 | 34 | 50 | 88 | 60 | 113 | 131 | 111 |
|  | 2003 | 8 | 30 | 64 | 138 | 138 | 178 | 141 | 139 |

Productivity may be used as a measure of efficiency, and was found to be related to the scale of production. The greatest productivity ( 178 tonnes per person) was achieved in those companies having a production between one thousand and one tonnes and two thousand tonnes and the least (eight tonnes per person) in the companies producing the smallest tonnages. In comparison with 2002 the average company productivity increased from 111 to 139 tonnes per person.

Overall production was dominated by 19 companies in 2003, which between them accounted for over $76 \%$ of the salmon production in Scotland.

Manpower and Production by Production Area
Table 35: Manpower and production (tonnes) by area 1994-2003 and projected production in 2004

| Region | Year | Staff |  | Annual Production | Productivity (t/pers) | Year of input |  | Grilse |  | Pre salmon |  | Salmon |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Company and Site Data

Table 36: Number of companies and sites engaged in salmon production during 1993-2003

| Year | Number of companies |  |  | Number of sites |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Producing | Non-producing | Total |  | Producing | Non- producing | Total |
| 1993 | 132 | 12 | 144 |  | 283 | 86 | 369 |
| 1994 | 119 | 12 | 131 |  | 262 | 101 | 363 |
| 1995 | 108 | 12 | 120 |  | 268 | 91 | 359 |
| 1996 | 106 | 1 | 107 |  | 278 | 56 | 334 |
| 1997 | 98 | 3 | 101 |  | 275 | 65 | 340 |
| 1998 | 95 | 11 | 106 |  | 289 | 54 | 343 |
| 1999 | 94 | 1 | 95 |  | 264 | 87 | 351 |
| 2000 | 68 | 22 | 90 |  | 163 | 183 | 346 |
| 2001 | 81 | 6 | 87 |  | 238 | 82 | 320 |
| 2002 | 73 | 11 | 84 |  | 197 | 131 | 328 |
| 2003 | 63 | 18 | 81 |  | 201 | 125 | 326 |

The number of companies registered with SEERAD and actively producing salmon in 2003 was 63, a decrease of ten on the 2002 figure. Eighteen companies remained active and registered, although not producing salmon for harvest in 2003. This continued the trend of salmon production being concentrated within fewer companies. These 81 companies have 326 registered active sites, although not all active sites may have produced fish for harvest in 2003.

## Fallowing

Table 37: Number of seawater sites employing a fallow period during 1994-2003

| Year | Fallow Period (weeks) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0 | $<4$ | $4-8$ | $9-26$ | $27-51$ | 52 | Total |
|  | 118 | 13 | 48 | 64 | 12 | 103 | 358 |
|  | 110 | 14 | 60 | 73 | 6 | 91 | 354 |
|  | 112 | 12 | 71 | 70 | 13 | 56 | 334 |
|  | 122 | 6 | 54 | 77 | 11 | 65 | 335 |
|  | 118 | 10 | 55 | 84 | 22 | 54 | 343 |
|  | 94 | 12 | 49 | 90 | 33 | 73 | 351 |
| 2000 | 74 | 23 | 61 | 86 | 25 | 75 | 344 |
| 2001 | 80 | 10 | 76 | 94 | 15 | 45 | 320 |
| 2002 | 99 | 8 | 85 | 85 | 24 | 27 | 328 |
| 2003 | 95 | 14 | 68 | 80 | 40 | 29 | 326 |

Of the 326 sites recorded as being active in 2003, 202 farms were fallow for a variable period, whilst a further 29 farms were fallow for the whole of 2003. The accepted normal production cycle in sea water varies in length between 18 months and two years, and a fallow period at the end of production can break the cycle of disease or parasitic infections. There were 95 sites that had no fallow period in 2003. These may have been stocked late in 2002 with out of season smolts, or may not follow recommended practice of incorporating a fallow period in the production cycle.

## Broodstock Sites

Table 38: Number of sites holding broodstock during 1992-2003

| Year | 1992 | 1993 | 1994 | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 | 2001 | 2002 | 2003 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Broodstock <br> sites | 15 | 21 | 24 | 18 | 28 | 37 | 25 | 20 | 18 | 15 | 19 | 20 |

In 2003, the number of sites holding broodstock, including freshwater and seawater sites was 20, an increase on the 2002 figure. The number of sites holding broodstock in any one year is variable, as can be seen from the previous years' figures, which indicate no obvious trend. Twenty one thousand and fifty six female fish were stripped, yielding almost 116 million ova, compared with almost 108 million in 2002 , which can be calculated to show an average ova yield per fish of 5,489.

## 4. OTHER SPECIES

There has been a continued increase in interest for the farming of other species. Brown trout (Salmo trutta) has been farmed for many years for the restocking market, but there is an increasing interest in farming marine species. These provide a diversification from the production of rainbow trout and Atlantic salmon, allowing some of the smaller companies to remain within the aquaculture sector and the larger companies to broaden their production base. As the other species sector expands, the employment provided and the contribution to the total production of the Scottish aquaculture industry will increase.

## Staffing

Table 39: Number of staff employed in farming other species during 1999-2003

| Year | Full-time | Part-time | Total |
| :---: | :---: | :---: | :---: |
| 1999 | 54 | 18 | 72 |
| 2000 | 73 | 25 | 98 |
| 2001 | 75 | 22 | 97 |
| 2002 | 69 | 30 | 99 |
| 2003 | 73 | 24 | 97 |

## Company, Site and Production Data

Table 40: Number of companies and sites producing other species and production of other species (tonnes) during 2000-2003 and estimated production in 2004

| Species | No of companies | No of sites | $2000$ <br> Production tonnage | $2001$ <br> Production tonnage | $2002$ <br> Production tonnage | $2003$ <br> Production tonnage | $2004$ <br> Production tonnage* |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Arctic Charr | 7 | 9 | 7 | 3.75 | 7.2 | 3.1 | 8.5 |
| Brown Trout/ Sea Trout | 27 | 43 | 138 | 105 | 175.7 | 198.3 | 231.2 |
| Cod | 15 | 21 | 15.7 | 15 | 0 | 82.1 | 179.7 |
| Halibut | 9 | 18 | 4.5 | 80 | 187.2 | 231.8 | 270.9 |

*farmers' estimates based on stocks currently being on-grown

Not all of this production is for the table market. There is some production of Arctic charr (Salvelinus alpinus) and brown trout for the angling restocking market.

## Escapes

There were two reported escapes from seawater farms rearing other species in 2003, involving the loss of 8,025 fish.

## Ova Laid Down to Hatch

Table 41: Source of other species' ova laid down to hatch during 2003

| Species | Source of ova laid down to hatch (000s) |  |  |
| :--- | :---: | :---: | :---: |
|  | Own <br> broodstock | Other GB <br> broodstock | Foreign ova |
| Arctic charr (Sa/velinus alpinus) | 10 | 43 | 0 |
| Cod (Gadus morhua) | 125,000 | d | d |
| Brown trout/Sea trout (Salmo trutta) | 2,252 | 173 | 0 |
| Halibut (Hippoglossus hippoglossus) | 14,000 | 0 | 0 |

${ }^{\text {d }}$ There were companies who laid down cod ova from other GB broodstock and from foreign sources but due to the small number of companies involved, it is not possible to summarise these data without revealing the figures of individual companies

## Trade in Small Fish

Table 42: Trade in other species small fish in 2003

| Species | Bought (000s) | Sold (000s) |
| :--- | :---: | :---: |
| Cod | 499 | 311 |
| Halibut | 158 | 110 |
| Brown Trout / Sea Trout | 198 | 1,010 |

There were also sites stocked with carp (Cyprinus carpio), turbot (Scophthalmus maximus), lemon sole (Microstomus kitt), brook charr (Salvelinus fontinalis) and haddock (Melanogrammus aeglefinus). There was production of brook charr and turbot, but due to the small number of companies in production, it is not possible to summarise these data without revealing the production of individual companies.

## 5. CONCLUSIONS

## Rainbow trout (Oncorhynchus mykiss)

The production of rainbow trout increased by $6 \%$ in 2003 to 7,085 tonnes and was directed at both the table ( $87.4 \%$ ) and restocking ( $12.6 \%$ ) markets. The total numbers of staff employed by the sector decreased by twelve to 148. As a consequence of this, the overall productivity of the industry increased to reach 47.9 tonnes per person. One of the reasons for this is the continued increase in the proportion of production from large farms that produce in excess of 200 tonnes.

The number of ova laid down to hatch increased by over four million and was almost exclusively either allfemale diploid ( $94 \%$ ) or sterile triploid ( $6 \%$ ) stocks. Only $2.7 \%$ of these ova were sourced within GB reflecting a continued rise in the numbers imported from abroad and a decline in the numbers of home produced ova. There was a significant decrease in the number of imports from South Africa with only $0.2 \%$ of the total. To meet the needs of out of season production there was an increase in the level of imports from the USA (43\% of total ova imported) and the introduction of imports from a new supplier in France. The trend reflecting the high dependence of the Scottish trout industry on imported ova was maintained.

There was a continuing trade in fingerlings, with the majority still being sourced within Scotland.
A high percentage of stock was vaccinated against ERM, indicating producers' awareness of the risk of infectious diseases.

## Atlantic salmon (Salmo salar)

The survey shows increased production of salmon, improved productivity per person and improved yield from smolts. There was a decrease in the production of smolts and the yield from ova stayed the same.

Smolt production decreased by $5.8 \%$ to 44.4 million with slightly under two thirds ( $64.9 \%$ ) being S1 and the majority of the remainder being $\mathrm{S}^{1} / 2(33.6 \%)$ smolts. The number of staff directly employed on freshwatersites decreased by 32. This resulted in an increase in productivity to over 119,000 fish per person. Although productivity per person increased, the actual number of smolts produced decreased by $5.8 \%$. The number of ova laid down to hatch has decreased by $7 \%$. The ratio of ova laid down to smolts produced has remained at 1.8 in 2003. Projected estimates for 2004 suggest that fewer ova were laid down to hatch, and that less smolts will be produced in 2004 followed by an increase in 2005.

The majority of ova for the production of Scottish salmon was derived from Scottish farmed stocks, with $26 \%$ derived from non-Scottish stocks, an increase of $8 \%$ on reliance from foreign sources. The export of ova to other countries within the EU decreased by $67 \%$ and there were no exports to Chile.

The production tonnage in sea water increased by $17.4 \%$ in 2003; due mainly to an increased average weight giving a higher yield per smolt put to sea. The number of staff directly employed on site decreased, with the loss of 89 jobs in the seawater industry. The estimated smolt placement in 2004 has decreased to 40.0 million and a decrease in production is expected in 2004 given the decrease in the number of smolts put to sea in 2003. The estimated harvest forecast for 2004 is 162,298 tonnes, a decrease of $4.4 \%$ on the 2003 total.

Although the production tonnage increased in 2003, the number of sites in production decreased from 328 to 326. The trend towards increasing the size of producing sites continued with $57 \%$ of sites producing over 500 tonnes in 2003.

## Other Species

Interest in the diversification of aquaculture continues as steady progress within this sector was maintained. In 2003 there were significant increases in the tonnages of cod, halibut and sea trout produced. Industry has predicted further increases in production for 2004.

## APPENDIX 1

Questionnaires sent to Fish Farmers

# ANNUAL RETURN of INFORMATION from SCOTTISH FISH FARMS for the PERIOD 1 JANUARY to 31 DECEMBER 2002 

## RAINBOW TROUT - DATA

Please complete and return by 31 JANUARY 2002 to R J Smith, FRS Marine Laboratory PO Box 101, Victoria Road, Aberdeen, AB11 9DB

## Name of site

Please correct site name here (if necessary)

Please correct main method of production on each site (if necessary), ie fresh water cages or tanks

1 How many staff were employed in RAINBOW TROUT production (company total)

## Part time

2 How many eyed ova were laid down for hatching in 2002
a from own broodstock
b from other GB broodstock
c from abroad (Northern Hemisphere incl, N Ireland and Isle of Man)
d from abroad (Southern Hemisphere)

3 How many of the above ova were
all female diploid
mixed sex diploid
all triploid
Site 1
Site 2
Site 3
Site 4

6 How many of these fish were vaccinated against ERM
vaccinated on site
bought vaccinated

What was your total production in TONNES for the TABLE TRADE

$$
<450 \mathrm{~g}(<1 \mathrm{lb})
$$

$450-900 \mathrm{~g}(1-2 \mathrm{lb})$
$>900 \mathrm{~g}(>2 \mathrm{lb})$

3 What was your total production in TONNES for the RESTOCKING TRADE
$<450 \mathrm{~g}(<1 \mathrm{lb})$
$450-900 \mathrm{~g}(1-2 \mathrm{lb})$
$>900 \mathrm{~g}(>2 \mathrm{lb})$

# SEERAD ANNUAL PRODUCTION SURVEY 2002 <br> GUIDANCE NOTES FOR QUESTIONNAIRE 

## Rainbow Trout

## GENERAL NOTES

1. Please check that the pre-printed information on the sheet is correct.
2. If a site is inactive and not part of a fallowing cycle, please write "INACTIVE" after the site name.
3. When completing the boxes please start from the right, if NONE then enter a zero in right hand box eg

Hopefully all questions are self explanatory but you may wish to note that:

## Q1. How many staff

a Please give the total number of full and part-time workers employed by the company in rainbow trout production
b Please ensure that the same staff are NOT included more than once if the company/business operates more than one site
c Staff employed solely in processing dead fish for marketing should NOT be included

## Q2. Ova laid down for hatching

Give the TOTAL NUMBER of ova laid down, if the number exceeds six figures please indicate the total number clearly in margin beside the appropriate box - this also applies to questions 3-5

## Q7-8. Weight of fish sold for:

Please record the weight of fish sold to the nearest tonne (not in kgs ), for part tonnes please indicate strongly using a decimal point, eg 31.5

It will be appreciated if the questionnaires are returned promptly and not later than 31 January to allow the Annual Survey Report for 2002 to be produced.

# ANNUAL RETURN OF INFORMATION FROM SCOTTISH FISH FARMS FOR THE PERIOD 1 JANUARY TO 31 DECEMBER 2002 

## ATLANTIC SALMON - SMOLT DATA

Please complete and return by 31 JANUARY 2003 to R J Smith, FRS Marine Laboratory PO Box 101, Victoria Road, Aberdeen, AB11 9DB

Reg No SF/

Please correct site name here<br>\section*{(if necessary)}

Please correct main method of production on each site (if necessary) ie fresh water cages or tanks

## Full time

$\square$ Part time

1 How many staff were employed in smolt production (company total)

2 How many ova were produced in the winter of 2001-2002 (company total)

3 How many eyed ova were laid down for hatching in winter of 2001-2002
a From own farmed broodstock
b From other GB farmed broodstock
c From GB wild broodstock
d From foreign sources

4 How many eyed ova do you expect to hatch this winter (2002-2003)

5 How many fry or parr were
a Transferred into the site
b Transferred out of the site
6 How many smolts were produced as
a S2s (ie from 2002 hatch)
b S1s (ie from 2001 hatch)
c $\mathbf{S 1 2 s}$ (ie from 2000 hatch)
d S2s (ie from 2000 hatch)

7 How many smolts were sold as
a S1s (incl S2s)
b S2s (incl S12s)

8 How many smolts do you expect to produce for sea winter on-growing next spring (2003) as
a S1s (incl S2s)
b S2s (incl S12s)

9 How many smolts do you plan to produce in 2004

10 What is the fish holding capacity of each site in cubic metres

11 Duration of FALLOW PERIOD in WEEKS (cage sites only)

12 How many fish did you vaccinate
a against furunculosis
b against ERM
c against IPN
d against Vibrio spp.

## SEERAD ANNUAL PRODUCTION SURVEY 2002

## GUIDANCE NOTES FOR QUESTIONNAIRE <br> AtLANTIC Salmon Smolts

## GENERAL NOTES

1. Please check that the pre-printed information on the sheet is correct.
2. If a site is inactive and not part of a fallowing cycle, please write "INACTIVE" after the site name.
3. When completing the boxes please start from the right, if NONE then enter a zero in right hand box eg

4. If the numbers for any box exceeds 6 figures please indicate the total number clearly in margin beside the appropriate box

Hopefully all questions are self explanatory but you may wish to note that:

## Q1. How many staff

Please enter the total number of full and part-time staff employed in smolt production, this includes maintenance staff and staff seasonally employed for specific purposes, eg vaccination - please indicate clearly if you have contracted out vaccinating work to avoid duplication in numbers

Please ensure that the same staff are NOT included more than once if your company operates more than one site, especially for companies which operate both smolt and salmon grower sites

Companies are asked to use their discretion as to what they class as full and part-time staff

## Q2. Number of ova produced

Enter the total number of ova produced by the company only once, if more than one form is used please enter zero or score out on subsequent forms

## Q6. How many smolts produced as S2 or S1 etc

The definitions used for the survey are:
S2 < 12 months old, ie put to sea in year of hatch
S1 12-18 months old, ie put to sea in January-June in year post hatch
S12 19-24 months old, ie put to sea in July-December in year post hatch
S2 $>24$ months old when put to sea

Q7. For S1s - combine numbers of S2s with S1s and
Q8. $\}$ For S2s - combine numbers of S12s with S2s

Q9. Enter here the total number of smolts (any stage) likely to be produced
Q11 Please enter the total cubic metre capacity for all tanks or cages combined
Q12. Fallow period - applies to cage sites only
Please enter any weeks that the site was fallow in 2002 (maximum =52)
It will be appreciated if the questionnaires are returned promptly and not later than 31 January to allow the Annual Survey Report for 2002 to be produced.

# ANNUAL RETURN OF INFORMATION FROM SCOTTISH FISH FARMS FOR THE PERIOD 1 JANUARY TO 31 DECEMBER 2002 

## ATLANTIC SALMON - PRODUCTION DATA

Please complete and return by 31 JANUARY 2003 to R J Smith, FRS Marine Laboratory PO Box 101, Victoria Road, Aberdeen, AB11 9DB

Reg No SF/

Please correct site name here (if necessary)

Please correct main method of production on each site (if necessary), ie sea water cages or tanks

1 How many staff were employed in salmon production (company total), excluding post-harvest processing staff

Site 1

6 HARVEST of 2001 SMOLT INPUT from 1 JANUARY to 31 AUGUST
a Number of tonnes
b Number of fish

7 HARVEST of 2001 SMOLT INPUT from 1 SEPTEMBER to 31 DECEMBER
a Number of tonnes
b Number of fish

8 HARVEST of 2000 SMOLT INPUT
a Number of tonnes
b Number of fish

9 How many tonnes of fish do you expect to harvest in 2003

10a Were brood fish produced in 2002
b How many fish were stripped

11 What is the current fish holding capacity of each site in cubic metres

12 Duration of FALLOW PERIOD in WEEKS (cage sites; MAX = 52)

13 Does a management agreement in respect of fish health operate with other producers in your area

Site 2

## Part time

Site 3

Site 4

2 How many smolts were put into the site in 2002 as:
S2s (ie from 2002 hatch)
b S1s (ie from 2001 hatch)
c S12s (ie from 2000 hatch)
d S2s (ie from 2000 hatch)

5 HARVEST of 2002 SMOLT INPUT in 2002
a Number of tonnes
b Number of fish

$\square$

## SEERAD ANNUAL PRODUCTION SURVEY 2003

## GUIDANCE NOTES FOR QUESTIONNAIRE

## AtLANTIC SALMON

## GENERAL NOTES

1. Please check that the pre-printed information on the sheet is correct.
2. If a site is inactive and not part of a fallowing cycle, please enter "INACTIVE" after the site name.
3. If a site was used only to hold broodstock for stripping please enter "BRD" after the site name.
4. When completing the boxes please start from the right eg for 250 tonnes enter as
 or if NONE then enter as or if NONE then enter as0

Hopefully all questions are self explanatory but you should note that:

## Q1. How many staff

Please enter the total number of full and part-time workers employed in salmon production; this includes site staff, veterinary and maintenance staff, vaccination teams, administrative and harvesting staff but NOT processing or marketing staff

Please ensure that the same staff are NOT included more than once if the company operates more than one site, especially if your company operates both salmon grower and smolt sites

## Q2. How many smolts put to sea

The definitions used for the survey are:
S2 <12 months old, ie put to sea in year of hatch
S1 12-18 months old, ie put to sea in January-June in the year post hatch
S12 19-24 months old, ie put to sea in July-December in the year post hatch
S2 $>\mathbf{2 4}$ months old, ie when put to sea
Q10. Broodstock production
Please circle YES if broodfish were produced on the site

## Q11. Fish holding capacity

Please enter the total cubic metre capacity for all tanks and cages combined or, if not known, give the size of tanks or cages (area or circumference plus depth x nos tanks or cages)

## Q12. Fallow period

For cage sites only; please enter any number of weeks a site was fallow in 2002; the total number of fallow weeks should not exceed 52

It will be appreciated if the questionnaires are returned promptly and not later that 31 January to allow the Annual Survey Report for 2002 to be produced.

## ANNUAL RETURN of INFORMATION from SCOTTISH FISH FARMS

 for the PERIOD 1 JANUARY to 31 DECEMBER 2002
## OTHER SPECIES - DATA

Please complete and return by 31 JANUARY 2003 to R J Smith, FRS Marine Laboratory, PO Box 101, Victoria Road, Aberdeen, AB11 9DB

# SEERAD ANNUAL PRODUCTION SURVEY <br> GUIDANCE NOTES FOR QUESTIONNAIRE <br> <br> OTHER Species 

 <br> <br> OTHER Species}

## GENERAL NOTES

1. The results of this survey will be made available to the FAO and will be published in the Annual Production Survey of Scottish Fish Farms produced by SEERAD, in summary form only.
2. All information on the form has been hand written, please check that it is correct.
3. If a site is inactive, and not part of a fallowing cycle, or is no longer used to culture the species concerned, please score through the relevant site name or species code.

| Species Codes |  |  |  |
| :---: | :---: | :---: | :---: |
| ACH | Arctic Charr | BCH | Brook Charr |
| CAR | Carp | COD | Cod |
| HAD | Haddock | HAL | Halibut |
| LSO | Lemon Sole | TIL | Tilapia |
| TRO | Brown/sea trout | TUR | Turbot |

## Q1. How many staff

Please include those staff that were involved only in other species production. Please do not include staff that are involved in the production of Atlantic salmon or rainbow trout.

It will be appreciated if the questionnaires are returned promptly and not later than 31 January to allow the annual survey report for 2002 to be produced

APPENDIX 2

Glossary and Abbreviations

| Active | Fish farms in a production growing cycle which may contain stock or be fallow. |
| :---: | :---: |
| Alevin | Young fish, at stage from hatching to end of dependence on yolk sacs as primary source of nutrition. |
| Approved Zone Status | EU recognition of an area clear of listed disease(s). |
| Broodstock | Adult fish held until maturation for breeding purposes. |
| Diploid | Fish with the normal two sets of chromosomes. |
| EEA | European Economic Area |
| EFTA | European Free Trade Association |
| EU | European Union |
| Eyed-ova/eggs | Fish egg(s) at the stage of development when the heavily pigmented eyes of the embryo are sufficiently developed to be clearly visible. |
| Fallow | Fish farm having no stock, but still part of a growing cycle. |
| Fingerling | A term commonly applied to young stages of salmonid fish. |
| FRS | Fisheries Research Services |
| Fry | Young salmon at stage from independence of yolk sac as primary source of nutrition to dispersal from the redd. |
| Gamete | Reproductive cells. |
| Grilse | Salmon maturing after one winter at sea. |
| Inactive | Fish farms not in a production cycle and without stock. |
| Intra-peritoneal | Within the body cavity. |
| Non-producing | A site which is active, may be stocked with fish, but has produced no fish for harvest during the specified year. |
| On-growing | Farm producing fish for the table market. |
| Ova | Eggs. |
| 0-year fish | Fish in their first year of life. |
| Parr | Young salmon at stage from dispersal from redd to migration as a smolt. |
| Photoperiod | Alteration of light regime. |
| Pre-salmon | Non-mature salmon usually after one winter at sea. |
| Raceway | Concrete or brick channels used for farming fish. |

| S $1 / 2$ | Salmon or sea trout smolting at approximately six months from hatch (usually by photoperiod and/or temperature manipulation). |
| :---: | :---: |
| S1 | Salmon or sea trout smolting at approximately one year from hatch. |
| S11/2 | Salmon or sea trout smolting at approximately 18 months from hatch. |
| S2 | Salmon or sea trout smolting at approximately two years from hatch. |
| SEERAD | Scottish Executive Environment and Rural Affairs Department |
| Smolt | Fully silvered juvenile salmon ready to be transferred or to migrate to sea. |
| Third Country | Country outside the EU. |
| Triploid | Genetically modified fish that have three sets of chromosomes instead of two. |
| Year Class | Fish hatched or put to sea in a given year. |
| ERM | Enteric redmouth |
| IHN | Infectious haemopoeitic necrosis |
| IPN | Infectious pancreatic necrosis |
| ISA | Infectious salmon anaemia |
| VHS | Viral haemorrhagic septicaemia |
| RTFS | Rainbow trout fry syndrome |

[^0]:    ${ }^{\text {a }}$ Excluding cod ova laid down to hatch from foreign sources or another GB company source.
    ${ }^{\mathrm{b}}$ Excluding cod ova imported.

[^1]:    ${ }^{\text {c }}$ Under the term of the Registration of Fish Farming and Shellfish Farming Business Order 1985, all persons engaged in the practice of fish farming in Scotland are required to register the details of their business within two months of the commencement of commercial activity. Fisheries Research Services is the Scottish Executive agency responsible for administering the fish farms business register and is the point of contact for farmers who wish to change registration details or register a new business. Although registration details of specific sites and businesses are confidential under the Diseases of Fish Act 1937 as Amended 1983, the company and site information is published here in summary form, in accordance with the terms of the Act.
