// FOREWORD

The annual production survey of fish farms in Scotland for 2013 was carried out by Marine Scotland Science (MSS). This survey collates annual production data from Scottish fin fish farm sites operated by authorised aquaculture production businesses. Surveys conducted by other organisations are produced independently of MSS and may not be directly comparable. The production tonnage obtained is for the wet weight of fish at harvest.

Responses to questionnaires from Scottish fish farming companies covering the period 1ST January to 31ST December 2013 are summarised in this survey. The questionnaires are given in Appendix 1a-d. The survey is structured to allow readers to follow industry trends within the rainbow trout, Atlantic salmon and other farmed species sectors. Data from previous years have been reassessed and updated where necessary. To allow direct comparison to data provided in previous surveys, production information by region is presented in defined areas.

The cooperation of the Scottish fish farming industry in completing the questionnaires is gratefully acknowledged. The authors also acknowledge Alan Christie, Sandy Murray, Keith Mutch, Nabeil Salama, Mhairi Sinclair, Ronald Smith and Amanda Walker for their contributions to the production of this report.

// EXECUTIVE SUMMARY

The tables below summarise the results from the 2013 fish farms annual production survey.

Rainbow Trout (Oncorhynchus mykiss)

		2012	2013
Total production	(tonnes)	5,670	5,611
Production for the table	(tonnes)	5,059	5,001
Production for restocking	(tonnes)	611	610
Number of staff employed		107	110
Mean productivity	(tonnes/person)	53.0	51.0
Number of ova laid down to hatch	(millions)	13.0	9.9
Number of ova imported	(millions)	12.7	9.3

In 2013, the production of rainbow trout decreased by 59 tonnes. Employment increased by three staff and mean productivity decreased to 51 tonnes per person. The number of ova laid down to hatch decreased by 3.1 million and the number of ova imported decreased by 3.4 million.

Atlantic salmon (Salmo salar)

Smolts

		2012	2013
Number of ova produced	(millions)	57.5	56.9
Number of ova laid down to hatch	(millions)	63.2	66.6
Number of ova exported	(millions)	0	0.7
Number of ova imported	(millions)	34.0	48.5
Number of smolts produced	(millions)	44.3	40.5
Number of smolts put to sea	(millions)	41.1	40.9
Number of staff employed		328	285
Mean productivity (000s smolts/person)		135.1	142.0

The production of ova decreased by 0.6 million in 2013 and the number of ova laid down to hatch increased by 3.4 million. A small number of ova were exported and imports of ova increased in 2013. The number of smolts produced decreased by 3.8 million. Data on smolt staffing and productivity in 2013 are shown, however, there are uncertainties with these data due to consolidation within the industry.

Production fish

		2012	2013
Total production	(tonnes)	162,223	163,234
Production of 0-year fish	(tonnes)	301	0
Production of grilse	(tonnes)	53,216	47,496
Production of pre-salmon	(tonnes)	44,528	58,665
Production of salmon	(tonnes)	64,178	57,073
Mean fish weight 0-year	(kg)	2.4	-
Mean fish weight grilse	(kg)	4.7	4.9
Mean fish weight pre-salmon	(kg)	4.4	5.0
Mean fish weight salmon	(kg)	4.9	5.1
Number of staff employed		1,059	1,086
Mean productivity	tonnes/person	153.2	150.3

Production tonnage increased by 1,011 tonnes with an increase in the mean harvest weight of grilse, pre-salmon and salmon. There were no 0-year fish harvested in 2013. Staff numbers increased by 27 and mean productivity decreased to 150.3 tonnes per person.

Smolt survival (percentage harvested)

Survival (%)	Years 0+1	Year 2	Total
2010 input year class	48.9	33.9	82.8
2011 input year class	50.6	26.4	77.0

The smolt survival rate for the 2011 input year class decreased to 77%

Other Species

(including Arctic charr, *Salvelinus alpinus*; brown/sea trout, *Salmo trutta*; cod, *Gadus morhua*; halibut, *Hippoglossus hippoglossus* and several species of wrasse, Labridae)

		2012	2013
Total production	(tonnes)	115	102
Number of staff employed	(full-time)	25	29
	(part-time)	21	21
Number of ova laid down to hatch	(millions)	1.9ª	7.7 ^c
Number of ova imported	(millions)	O b	O d

Some figures are excluded from this report as providing them would reveal production information from individual companies.

- a Excluding wrasse ova laid down to hatch from foreign sources.
- b Excluding wrasse ova imported.
- c Excluding halibut ova laid down to hatch.
- d Excluding halibut ova imported.

In 2013, the production of other species decreased by thirteen tonnes from the 2012 total. Overall, employment increased by four people in 2013. There was a marked increase in the number of ova laid down to hatch although the complete figures for ova cannot be shown without revealing the figures for individual companies.

Number of Confirmed Escape Incidents from Fish Farms Notified to the Scottish Government

Species	Number of reported incidents which could have led to an escape of farmed fish	Number of reported incidents which did lead to an escape of farmed fish	Number of fish escaped
Rainbow trout	0	2	7,442
Atlantic salmon (freshwater stages)	0	2	16,646
Atlantic salmon (seawater stages)	4	4	9,709
Halibut	0	1	6,957

// 1.RAINBOW TROUT (ONCORHYNCHUS MYKISS)

Production survey information was collected from all 24 companies actively involved in rainbow trout production, farming 46 active sites. This figure represents the entire industry operating in Scotland.

Production

Table 1a: Total production (tonnes) of rainbow trout during 1999-2013 and projected production in 2014

Year	Tonnes	Year	Tonnes
1999	5,834	2007	7,414
2000	5,154	2008	7,670
2001	5,466	2009	6,766
2002	6,659	2010	5,139
2003	7,085	2011	4,619
2004	6,352	2012	5,670
2005	6,989	2013	5,611
2006	7,492	2014	6,836*

Production decreased in 2013 by 59 tonnes, a decrease of 1%.

Table 1b: Production (tonnes) for the table trade during 2003-2013 according to weight category

Voor	<450 g	450-900 g	>900 g	Total
Year	<1 lb	1-2 lbs	>2 lbs	Tonnes
2003	2,531	1,181	2,477	6,189
2004	1,553	1,946	1,917	5,416
2005	2,856	1,203	2,111	6,170
2006	2,182	1,810	2,636	6,628
2007	2,499	1,663	2,407	6,569
2008	2,375	1,950	2,487	6,812
2009	2,232	1,143	2,620	5,995
2010	2,125	727	1,606	4,458
2011	1,421	1,004	1,433	3,858
2012	1,195	1,655	2,209	5,059
2013	1,908	825	2,268	5,001

^{*} Industry estimate based on stocks currently being on-grown.

Production for the table in 2013 was 5,001 tonnes, a decrease of 58 tonnes (1%) on the 2012 total, and accounted for 89.1% of the total rainbow trout production, a similar proportion to that produced in 2012. Increases in the number of fish in the small and large size ranges and a decrease in the number of fish in the medium size range were highlighted.

Table 1c: Production (tonnes) for the restocking trade during 2003-2013 according to weight category

Year	<450 g <1 lb	450-900 g 1-2 lbs	>900 g >2 lbs	Total Tonnes
2003	63	490	343	896
2004	64	509	363	936
2005	21	390	408	819
2006	36	357	471	864
2007	24	413	408	845
2008	27	351	480	858
2009	32	294	444	770
2010	19	201	461	681
2011	8	419	334	761
2012	22	266	323	611
2013	24	221	365	610

In 2013, production for the restocking of angling waters decreased to 610 tonnes representing a decrease of one tonne (0.2%) on the 2012 total. This accounted for 10.9% of total rainbow trout production in 2013. These figures represent the tonnage of fish supplied to angling waters for restocking purposes; they do not account for the catch taken by anglers. The production of medium sized fish showed a decrease, while this increased for small and large sized fish.

Production by Site

Table 2: Numbers of sites grouped by tonnage produced during 2003-2013

Year	Total number of				
rcui	<1-25	26-100	101-200	>200	sites
2003	17	9	6	11	43
2004	14	14	5	10	43
2005	18	12	6	11	47
2006	16	15	6	13	50
2007	14	15	3	16	48
2008	8	15	7	14	44
2009	10	11	7	11	39
2010	7	13	9	7	36
2011	9	10	6	8	33
2012	10	10	6	8	34
2013	6	11	5	8	30

Production was reported from 30 of the 46 active sites. The number of producers in the size brackets <1-25 tonnes and 101-200 tonnes decreased in 2013, while those producers in the 26-100 tonne size bracket increased and the >200 tonnes size bracket remained the same. These figures do not include those sites specialising in the production of ova or young fish for on-growing.

Production by Method

Table 3: Grouping of rainbow trout sites by production tonnages, main methods of production in 2013 and comparison with production in 2012

Production	Prod	luction gr	ouping (t	connes) in	2013		ge and (%) by thod	Number of sites	
method	<10	10-25	26-50	51-100	>100	2012	2013	2012	2013
FW cages	1	0	0	0	5	2,220 (39.2%)	2,424 (43.2%)	6	6
FW ponds and raceways	1	1	3	7	3	1,362 (24.0%)	1,213 (21.6%)	18	15
FW tanks and hatcheries	3	0	0	0	0	12 (<1%)	10 (<1%)	3	3
SW cages	0	0	1	0	5	2,076 (36.6%)	1,964 (35.0%)	7	6
SW tanks	0	0	0	0	0	0	0	0	0
Total	5	1	4	7	13	5,670	5,611	34	30

Freshwater production accounted for 3,647 tonnes (65.0%) and seawater production for the remaining 1,964 tonnes (35.0%). Production from freshwater cages increased whilst there was a decrease in production from freshwater ponds and raceways and seawater cages.

Company and Site Data

Table 4: Number of companies and sites in production during 2000-2013

Year	No. of companies	No. of sites
2000	54	63
2001	50	57
2002	39	57
2003	37	56
2004	38	62
2005	42	70
2006	36	66
2007	38	70
2008	31	66
2009	27	56
2010	25	51
2011	23	48
2012	25	48
2013	24	46

In 2013, the number of companies authorised by the Scottish Government and actively engaged in rainbow trout production was 24. The number of sites registered and in production was 46.

Staffing and Productivity

Table 5: Number of staff employed and productivity per person during 2000-2013

Year	Full-time	Part-time	Total	Productivity (tonnes/person)
2000	121	47	168	30.7
2001	118	41	159	34.4
2002	114	46	160	41.6
2003	107	41	148	47.9
2004	115	37	152	41.8
2005	108	35	143	48.9
2006	112	35	147	51.0
2007	111	32	143	51.8
2008	107	34	141	54.4
2009	111	27	138	49.0
2010	98	31	129	39.8
2011	95	23	118	39.1
2012	79	28	107	53.0
2013	89	21	110	51.0

The overall number of staff employed in 2013 increased by three to 110. The numbers of full-time staff increased by 10 while the number of part-time staff decreased by seven. Productivity, measured as tonnes produced per person, decreased by 3.8% in 2013 with no distinction between full and part-time employees being made for this calculation.

Production by Area

Table 6: Production and staffing by area in 2013

Area	No. of sites	Table production (tonnes)	Restocking production (tonnes)	Mean tonnes per site	Staffing			Productivity (tonnes/ person)
					F/T	P/T	Total	
North	6	5	36	6.8	2	2	4	10.3
East	14	881	248	80.6	32	6	38	29.7
West	12	3,593	39	302.7	20	7	27	134.5
South	14	522	287	57.8	35	6	41	19.7
All	46	5,001	610	122.0	89	21	110	51.0

Productivity was greatest in the West at 302.7 tonnes per site and 134.5 tonnes per person.

2011	215	189	404	14,738	0	14,738	15,142	
2012	14	230	244	12,735	0	12,735	12,979	
2013	77	537	614	9,275	0	9,275	9,889	

The total number of eyed ova laid down to hatch in 2013 was less than that in 2012. The proportion of ova from GB broodstock increased to 6.2% of the total and the rainbow trout industry remained reliant on imported ova. Data on the importation of ova into Scotland are also available from the health certificates and are shown in Table 9a. Any discrepancy between the figures in Tables 8 and 9a is due to data being obtained from two independent sources.

Imports from Official Import Health Certificates

Table 9a: Number (000s) and sources of ova imported into Scotland from outwith GB during 2006-2013

Totals	1,315	800	5,125	175	2,350

Suppliers within the European Union (EU) accounted for 74.1% of ova imported into Scotland during 2013 with the USA and the Isle of Man accounting for 24.1% and 8.2% respectively. To maintain their ability to regulate production throughout the year and produce a constant supply of fish for their markets, producers have to rely upon supplies of out of season ova.

Trade in Fry and Fingerlings

Table 10: Number (000s) of fry and fingerlings traded during 2002-2013

	Fry ar	nd fingerlings b	ought	Total	Total
Year	All female diploid no. (%)	Triploid no. (%)	Mixed sex diploid no. (%)	number bought	number sold
2002	10,031 (88)	670 (6)	667 (6)	11,368	10,101
2003	17,500 (94)	1,007 (5)	193 (1)	18,700	17,451
2004	18,859 (91)	1,536 (7)	364 (2)	20,759	19,166
2005	14,618 (83)	1,532 (9)	1,480 (8)	17,630	16,919
2006	19,731 (89)	1,675 (7)	790 (4)	22,196	20,460
2007	14,830 (89)	1,140 (7)	675 (4)	16,645	23,631
2008	24,298 (95)	1,082 (4)	118 (0.5)	25,498	31,036
2009	21,113 (94)	1,358 (6)	0	22,471	20,597
2010	15,539 (95)	585 (4)	141 (1)	16,265	14,686
2011	16,288 (88.5)	1,970 (10.7)	138 (0.8)	18,396	16,612
2012	12,543 (91)	1,226 (9)	0	13,769	12,088
2013	6,734 (84)	1,239 (16)	0	7,973	6,749

The established trade between hatcheries and on-growing farms continued in 2013. Some companies specialised in the production of fry and fingerlings. The total number of fry and fingerlings bought and sold decreased by 42.1% and 44.2% respectively. The disparity between supply and demand is due to trade with England and Wales.

Use of Vaccines

Table 11: Number of sites rearing fish vaccinated against enteric redmouth disease (ERM) and number of fish vaccinated (millions) during 2002-2013

	2002											
No. of sites												
No. of fish	30.6	32.9	30.6	30.0	36.4	41.4	29.1	27.5	20.0	20.3	20.4	9.9

Vaccines continued to be widely used as a preventative treatment against enteric redmouth disease (ERM), a potentially serious bacterial infection, caused by *Yersinia ruckeri*. Vaccination is generally carried out as a bath treatment at the fingerling stage, although some vaccines are administered by intra-peritoneal injection. A total of 9.9 million fish were vaccinated on 19 sites.

Organic Production

None of the 46 active rainbow trout sites in 2013 had organic certification.

Escapes

There were two incidents involving the loss of a total of 7,442 fish from rainbow trout sites in 2013

// 2. ATLANTIC SALMON (*SALMO SALAR*) – OVA AND SMOLTS

Production survey information was collected from all 27 companies actively involved in the freshwater production of Atlantic salmon, farming 102 active sites. This figure represents the entire freshwater industry operating in Scotland.

Company and Site Data

Table 12: Number of companies and sites in production during 2004-2013

Year	No. of companies	No. of sites
2004	48	172
2005	41	148
2006	39	135
2007	37	135
2008	38	130
2009	30	105
2010	31	104
2011	28	98
2012	28	100
2013	27	102

In 2013, 27 companies authorised by the Scottish Government were actively engaged in the commercial freshwater production of Atlantic salmon farming a total of 102 sites.

Production and Staffing

Table 13: Number (000s) of smolts produced, staff employed and smolt productivity during 2003-2013

Year		2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Number (000s) of produced		44,414	39,999	36,326	40,827	38,125	36,450	36,868	36,872	43,626	44,324	40,457
	Full- time	291	259	200	209	217	209	216	233	225	235	237
Staffing	Part- time	82	60	74	62	62	54	54	56	68	93	48
	Total	373	319	274	271	279	263	270	289	293	328	285
Productive 000s of sper person	molts	119.1	125.4	132.6	150.6	136.6	138.6	136.5	127.6	148.9	135.1	142.0

Smolt production in 2013 decreased by 8.7% compared to 2012. Data for staffing and productivity in 2013 are shown, however, there are uncertainties with these data due to consolidation within the industry.

Smolts by Age Group

Table 14: Number of smolts (000s) produced by type during 2001-2013

Year	S½	S1	S1½	S 2	Total
2001	14,684	32,732	110	20	47,546
2002	15,791	30,527	843	0	47,161
2003	14,907	28,836	671	0	44,414
2004	14,428	24,862	709	0	39,999
2005	12,639	22,197	1,489	1	36,326
2006	16,953	23,172	698	4	40,827
2007	15,431	22,694	0	0	38,125
2008	12,431	24,019	0	0	36,450
2009	13,837	23,031	0	0	36,868
2010	14,116	22,756	0	0	36,872
2011	17,233	26,393	0	0	43,626
2012	18,795	25,239	290	0	44,324
2013	19,024	21,279	154	0	40,457

There was an increase in the number of S½s and a decrease in the number of S1 smolts produced respectively. A small amount of S1½ were produced and there was no production of S2 smolts.

Production Systems

Table 15: Number and capacity of production systems during 2009-2013

System	N	o. of si	tes wit	h syste	m	Total	capacit	y, 000s	cubic n	netres
Year	2009	2010	2011	2012	2013	2009	2010	2011	2012	2013
Cages	47	45	44	43	44	388	401	325	349	372
Tanks and Raceways	58	59	54	57	58	37	38	49	51	64
Total	105	104	98	100	102	425	439	374	400	436

The principal types of facility used for the production of smolts in fresh water are cages or tanks and raceways. In 2013, the number of farms using cages increased by one and the number of farms using tanks and raceways also increased by one. In terms of volume, cage capacity increased by 23,000 m³ and tank and raceway capacity increased by 13,000 m³. This resulted in a net increase in volume of 36,000 m³ available for the production of smolts in Scotland during 2013.

Table 16: Number (000s) of smolts produced and stocking densities by production system during 2009-2013

	Nun	nber of si	molts pro	duced (00	00s)	Stocking densities (smolts/m³)						
Year	2009	2010	2011	2012	2013	2009	2010	2011	2012	2013		
Cages	17,041	20,333	23,135	26,882	20,910	44	51	71	77	56		
All others	19,827	16,539	20,491	17,442	19,547	536	435	418	342	305		
Total	36,868	36,872	43,626	44,324	40,457	-	-	-	-	-		

The average stocking densities of cages decreased from 77 to 56 fish per m³ in 2013 compared to 2012 while densities in tanks and raceways decreased from 342 to 305 fish per m³.

Ova Production

Table 17: Number (000s) of salmon ova produced during 2006-2013

Year	2006	2007	2008	2009	2010	2011	2012	2013
No. of ova	60,941	83,822	135,230	91,964	91,655	78,208	57,489	56,904

In 2013, nearly 57 million ova were stripped, a similar number to 2012.

Table 18: Source, number (000s) and previous year's estimate of ova laid down to hatch during 2002-2014

Year	In-house broodstock	Out- sourced GB broodstock	GB wild broodstock	Foreign ova	Total	Previous year's estimate
2002	40,732	30,664	120	15,184	86,700	80,679
2003	38,766	21,138	0	20,822	80,726	73,193
2004	31,390	20,024	27	19,138	70,579	74,464
2005	43,261	22,465	71	9,896	75,693	65,741
2006	19,063	17,768	63	27,157	64,051	58,385
2007	18,837	14,366	78	42,022	75,303	68,032
2008	19,831	14,261	171	26,409	60,672	75,302
2009	17,148	20,158	65	30,200	67,571	64,693
2010	13,744	26,220	0	29,657	69,621	61,011
2011	15,664	14,630	0	34,322	64,616	54,526
2012	18,556	9,981	0	34,700	63,237	55,723
2013	16,995	8,263	0	41,315	66,573	49,249
2014						48,149

The number of ova laid down to hatch was 66.6 million, an increase of over three million (5.3%) on the 2012 figure. The majority of the ova (62.1%) were derived from foreign sources, this being an increase of 6.6 million (19.1%) on the 2012 figure. Supplies derived from GB broodstock decreased by 3.3 million this being an 11.5% decrease on the 2012 figure. No ova from GB wild broodstock were laid down in 2013, however, in previous years the ova derived from wild stocks were generally held and hatched for wild stock enhancement by the aquaculture industry in cooperation with wild fisheries managers.

Smolts Produced and Put to Sea

Table 19: Actual and projected smolt production and smolts put to sea (millions) during 2004-2015

	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Actual smolts put to sea	39.1	37.2	41.1	37.8	36.6	38.5	38.5	42.7	41.1	40.9		
Smolts produced	40.0	36.3	40.8	38.1	36.4	36.9	36.9	43.6	44.3	40.5		
Estimated production	40.0	36.2	33.2	41.2	34.9	32.6	28.7	35.9	31.3	28.1	39.9	41.8
Ratio of ova laid down to smolts produced	1.8	2.1	1.6	2.0	1.7	1.8	1.9	1.5	1.4	1.6		

The figure for the number of smolts put to sea includes smolts produced in England and fish imported from elsewhere, whereas smolt production data relate only to those produced in Scotland. Farmers estimate putting 39.9 million smolts to sea in 2014. The ratio of ova laid down to hatch to smolts produced in 2013 was greater than in 2012.

Scale of Production

Table 20: Smolt-producing sites grouped by numbers (000s) of smolts produced during 2000-2013

 				Scale o	f produ	ction			No. of	Total
Year	1-10	11-25	26- 50	51- 100	101- 250	251- 500	501- 1,000	>1,000	sites in production	smolts produced
2000	1	2	10	17	36	24	24	9	123	45,583
2001	0	1	7	19	30	26	13	14	110	47,546
2002	1	1	11	17	29	34	17	10	120	47,161
2003	2	0	7	20	32	31	12	10	114	44,414
2004	3	3	9	14	31	22	18	7	107	39,999
2005	2	1	4	15	25	22	21	4	94	36,326
2006	1	4	2	9	19	21	18	10	84	40,827
2007	2	2	4	7	21	21	14	11	82	38,125
2008	2	1	5	8	21	20	15	9	81	36,450
2009	0	0	3	7	14	18	10	12	64	36,868
2010	1	0	4	4	16	15	10	14	64	36,872
2011	1	0	4	5	11	14	9	17	61	43,626
2012	0	0	1	3	19	14	11	13	61	44,324
2013	1	0	1	7	14	14	7	14	58	40,457

Note: This data refer only to sites producing smolts. The sites holding only ova, fry or parr are excluded.

The number of sites producing smolts in 2013 was 58. The number of sites producing less than 101,000 smolts has increased by five while there has been an decrease of nine in the number of sites producing between 101,000 and one million smolts. The number of sites producing in excess of one million smolts per year has increased by one.

Production of Ova and Smolt by Production Area

Table 21: Staffing in 2013, ova laid down to hatch in 2012-2013, smolt production in 2012-2013 and estimated production in 2014-2015 by region

Region	Number of staff employed in 2013			down to (000s)		oduction (0s)			
	F/T	P/T	2012	2013	2012	2013		2014	2015
North West	125	17	29,998	34,090	27,271	24,451		23,544	23,053
Orkney	1	1	0	55	130	142		140	140

West	38	12	8,375	16,906	6,582	7,628		9,230	11,392
Western Isles	38	5	10,053	6,200	5,034	5,866		4,326	3,470
East and South	16	1	13,561	5,640	3,626	902		1,359	1,300
All Scotland	237	48	63,237	66,574	44,324	40,457		39,862	41,755

FIGURE 2: THE DISTRIBUTION OF ACTIVE ATLANTIC SALMON SMOLT SITES IN 2013

In 2013, the North West and the West were the main areas where ova were laid down to hatch. The North West, the West and the Western Isles were the main smolt producing areas. The greatest number of staff were employed in the North West region.

International Trade in Ova

Since the introduction of the EU single market on 1st January 1993 and the associated Fish Health Regulations common to all EU member states, a trade in live salmon and ova has been established. In addition, the European Economic Area (EEA) agreement allows trade between the EU and the member states of the European Free Trade Association (EFTA). Trade is based on the same rules as are established within the EU regarding compartments and zones declared free from listed diseases.

Trade with Third Countries has also been established, but only from sites that have met the same health standards as are established within the EU regarding the approval of farms and zones for listed diseases. Exports to countries outside the EU are subject to the health conditions placed by the importing country. Marine Scotland Science advises potential exporters to ascertain with the importing country any specific health testing requirements that may be a condition of import.

Imports and Exports

Table 22a: Source and number (000s) of ova, parr and smolts imported during 2001-2013 derived from health certificates

		Ova										
Import Year	EU	EF	TA	Third Cou	ıntries	Total	EU Member					
	Member States	Iceland	Norway	Australia	USA	- Total	States					
2001	8,173	10,833	0	1,620	0	20,626	2,475					
2002	8,650	11,623	0	1,800	500	22,573	2,879					
2003	7,820	9,518	2,900	550	400	21,188	2,570					
2004	4,450	3,475	6,750	1,860	450	16,985	824					
2005	2,610	570	13,210	0	450	16,840	150					
2006	11,575	300	15,940	2,400	0	30,215	375					
2007	10,511	0	33,555	0	0	44,066	420					
2008	5,600	0	22,703	0	0	28,303	519					
2009	5,460	0	29,938	0	0	35,398	328					
2010	2,150	0	26,533	0	0	28,683	452					
2011	3,400	0	35,851	0	0	39,251	800					
2012	10,134	0	23,849	0	0	33,983	0					
2013	10,700	2,719	35,044	0	0	48,463	55					

The numbers of ova imported increased by 42.6%. A small number of parr and smolts were imported in 2013.

Table 22b: Destination and number (000s) of salmon ova, parr and smolts exported during 2002-2013 derived from health certificates

Evport year		Farm	ed origin		Total	Parr and Smolts
Export year	Chile	EU	Norway	Others		
2002	1,600	6,627	0	0	8,227	0
2003	0	2,171	0	0	2,171	941
2004	2,215	3,699	0	0	5,914	1,488

2011	0	0	0	820	820	183
2012	0	0	0	0	0	55
2013	0	650	0	0	650	404

In 2013, 650,000 ova were exported. Parr and smolt exports increased by 635% on the 2012 figure.

Vaccines

Table 23: Number of sites using vaccines and number (millions) of fish vaccinated during 2005-2013

Year	2005	2006	2007	2008	2009	2010	2011	2012	2013
No. of sites	84	79	73	80	68	70	67	63	63
No. of fish (millions) vaccinated	33.8	43.5	41.0	36.7	39.6	42.6	49.2	48.1	47.5

Vaccines were used to provide protection against furunculosis, infectious pancreatic necrosis (IPN), enteric redmouth disease (ERM), vibriosis and salmonid alphavirus (SAV). The majority of fish were vaccinated against furunculosis and IPN, with smaller numbers of fish being vaccinated against ERM, vibriosis and SAV. A total of 47.5 million fish were vaccinated across 63 sites.

Escapes

There were two incidents involving the loss of 16,646 freshwater farmed Atlantic salmon in 2013.

// 3.ATLANTIC SALMON - PRODUCTION

Production

Production survey information was collected from all 21 companies actively involved in Atlantic salmon production, farming 257 active sites. This figure represents the entire industry operating in Scotland.

Table 24: Annual production of salmon (tonnes) during 1993-2013, percentage change from the previous year and projected production in 2014

Year	Tonnes	Percentage difference	Year	Tonnes	Percentage difference
1993	48,691	35	2004	158,099	-7
1994	64,066	32	2005	129,588	-18
1995	70,060	9	2006	131,847	2
1996	83,121	19	2007	129,930	-1.4
1997	99,197	19	2008	128,606	-1
1998	110,897	12	2009	144,247	12
1999	126,686	14	2010	154,164	6.9
2000	128,959	2	2011	158,018	2.5
2001	138,519	7	2012	162,223	2.7
2002	144,589	4	2013	163,234	0.6
2003	169,736	17	2014	162,374*	

^{*}industry estimate of projected tonnage based on stocks currently being on-grown.

The total production of Atlantic salmon during 2013 was 163,234 tonnes, an increase of 1,011 tonnes (0.6%) on the 2012 production.

Table 25: Number (000s), production (tonnes) of salmon harvested and mean fish weight (kg) per year class during 2003-2013

	Year of smolt input	Year of harvest	Number (000s)	Production (tonnes)	Mean weight at harvest (kg)

2012	41,094	127	301	2.4	0.3	21,264	106,161	2.0	51.7							
2013	40,936	0	1	ı	0											

In 2011, the last year for which survival can be calculated, the survival rate from smolt input to harvest decreased to 77.0%. Of the 2012 year class, 52.0% of the input has been harvested, 1.4% higher than the average harvest of fish one year after input in the 2011 year class. In 2013, there was no harvest of fish from the 2013 smolt input. This was a decrease compared with the proportion of fish harvested from the same year class in 2012.

Smolts to Sea

Table 29: Number (000s) and origin of smolts put to sea during 2001-2013

Year	Smo	olts put to	sea (000s	5)	Total	Scottish Origin	English O	rigin	Other O	rigin
	S½	S1	S1½	S2	- (000s)	%	(000s)	%	(000s)	%
2001	14,118	34,321	171	33	48,643	98	1,183	2	0	0
2002	15,850	32,761	1,475	0	50,086	94	1,564	3	1,676	3
2003	14,534	28,283	986	0	43,803	93	2,590	6	325	>1
2004	14,044	23,776	1,221	0	39,041	97	634	2	541	>1
2005	13,051	22,501	1,616	0	37,168	96	1,594	4	0	0
2006	15,578	23,733	1,779	0	41,090	96	1,257	3	272	>1
2007	14,665	23,188	0	0	37,853	94	1,747	5	420	1
2008	11,101	25,561	0	0	36,662	96	1,418	4	0	0
2009	14,967	23,581	0	0	38,548	95	1,700	4	105	<1
2010	14,069	24,421	0	0	38,490	95	1,541	4	120	<1
2011	17,721	25,012	0	0	42,733	96	1,765	4	0	0
2012	17,334	23,480	280	0	41,094	96	1,510	4	0	0
2013	19,262	21,534	140	0	40,936	97	1,169	3	55	<1

The total number of smolts put to sea in 2013 was 40.9 million. This smolt input comprised S1s (52.6%), S½s (47.1%) and a small number of S1½s (0.3%). Three percent of the smolts stocked to Scottish salmon farms were sourced from outwith Scotland. This was a decrease of 1% compared with the proportion observed in 2012.

^{*} The survival of the 2008 smolt input in the South West is over 100% due to the practice of putting smolts to sea in one region and subsequently moving them to another sea water site in another region for harvest.

Staffing

Table 31: Number of staff employed in the production of salmon during 2003-2013

	Yea	ar	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
St	taff	F/T	1,066	1,019	851	790	798	849	874	944	923	944	992
		P/T	151	142	128	81	118	100	89	120	90	115	94
То	tal sta	aff	1,217	1,161	979	871	916	949	963	1,064	1,013	1,059	1,086
	oductiv nnes/p	vity person)	139.5	136.2	132.4	151.4	141.8	135.5	149.8	144.9	156.0	153.2	150.3

In 2013, the total number of staff employed in salmon production was 1,086, an increase of 27 compared with 2012. The staffing figures collected refer specifically to the production of Atlantic salmon and do not include figures for staff involved with processing or marketing activities. Productivity decreased from 153.2 to 150.3 tonnes produced per person.

Production Methods

Table 32: Production methods, capacity (000s cubic metres), tonnage and average stocking densities (kg/m³) during 2011-2013

Method	Num	ber of s	ites		al capaci cubic me		Prod	uction (tor	nnes)
	2011	2012	2013	2011	2012	2013	2011	2012	2013
Seawater tanks	2	2	4	6.1	5.9	6.0	141	64	34
Seawater cages	252	255	253	17,152	17,889	19,064	157,877	162,159	163,200
For cage sites: ra	atio of p	roductio	on (kg) t	o cage ca	pacity (m	1 ³)	9.2	9.1	8.6

The vast majority of fish were produced in seawater cages. There were 34 tonnes of production from seawater tank sites in 2013. This reflects the continued high installation and running costs incurred in operating seawater tank systems. Most seawater tank capacity has been re-deployed for the production of other species of marine fin fish or salmon broodstock.

Sea cage capacity increased by 1,175,000 m³ during 2013 and the number of sea cage sites in production decreased by two. Production efficiency in sea cages, measured as the ratio of fish weight in kilograms produced per cubic metre, decreased to 8.6 kg/m³.

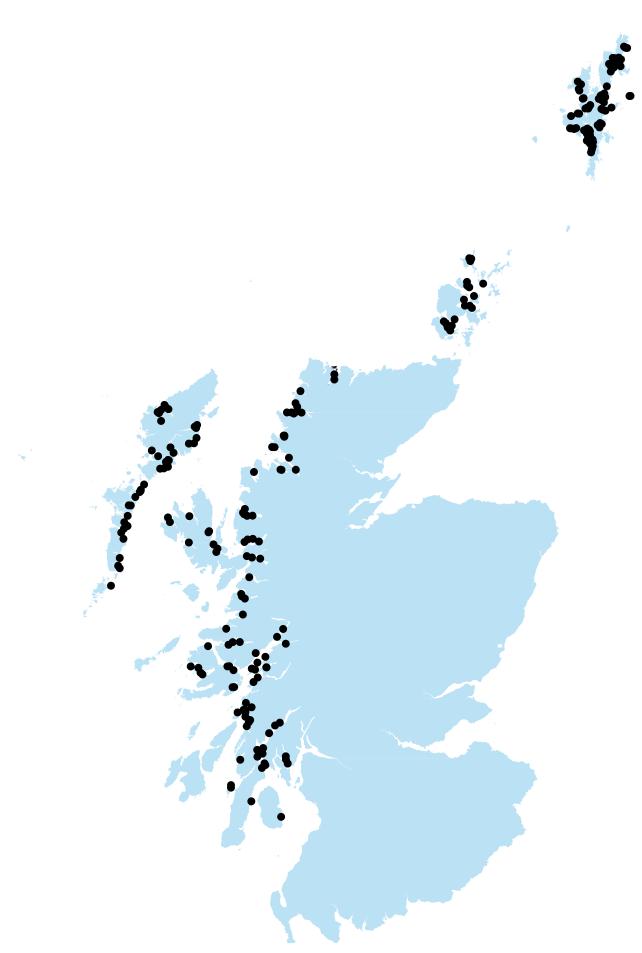

FIGURE 3: THE DISTRIBUTION OF ACTIVE ATLANTIC SALMON PRODUCTION SITES IN 2013

Scale of Production by Site

Table 33: Number of sites shown in relation to their production grouping and percentage share of production 2003-2013

2013	0	0.1	0.1	1.1	4.0	16.7	78.0	-	-

^{*}Includes farms stocked but having no production.

In 2013, the number of sites with no production dropped by three whilst the number producing 1 to 500 tonnes remained the same. The number of sites producing over 500 tonnes increased by three, continuing the trend towards production in larger sites.

Company Productivity

Table 34: Number of companies grouped by production (tonnes), manpower and productivity (tonnes per person) during 2012-2013

Total Tonnag	ge	0-100	101- 200	201- 400	401- 700	701- 1,000	1,001- 2,000	>2,000	Total
No. of companies	2012	9	2	1	0	1	1	8	22
	2013	9	1	1	1	1	1	7	21
No. of tonnes	2012	84	353	219	0	951	1,064	159,552	162,223
	2013	38	144	232	493	890	1,278	160,159	163,234
Manpower (total)	2012	14	12	6	0	6	5	1,016	1,059
,	2013	17	7	3	2	5	29	1,023	1,086
Productivity	2012	6	29	37	0	159	213	157	153
(tonnes/person)	2013	2	21	77	247	178	44	157	150

In 2013, the greatest productivity of 247 tonnes per person was achieved in the companies producing 401-700 tonnes. The least productivity of two tonnes per person was from the companies producing the smallest tonnages. In comparison with 2012, the average company productivity decreased from 153 to 150 tonnes per person. Overall, production was dominated by seven companies in 2013 which between them accounted for over 98% of Scotland's farmed Atlantic salmon production.

2005	40	10	50	166	112	278
2006	32	12	44	157	95	252
2007	28	10	38	158	89	247
2008	26	9	35	139	118	257
2009	25	6	31	150	104	254
2010	20	10	30	140	109	249
2011	21	6	27	148	106	254
2012	16	6	22	142	115	257
2013	15	6	21	145	112	257

The number of companies authorised and actively producing Atlantic salmon in 2013 was 15, a decrease of one from 2012. Six companies remained active and authorised, although not producing salmon for harvest in 2013. This continued the trend of Atlantic salmon production becoming concentrated within fewer companies. These 21 companies had 257 registered active sites, although not all these sites produced fish for harvest in 2013.

Fallowing

Table 37: Number of seawater cage sites employing a fallow period during 2004-2013

Year -	Fallow Period (weeks)							
real -	0	<4	4-8	9-26	27-51	52	- Total	
2004	82	9	52	95	42	35	315	
2005	75	11	36	86	37	33	278	
2006	67	10	44	74	37	20	252	
2007	67	16	41	61	38	24	247	
2008	53	16	28	92	40	28	257	
2009	51	3	30	86	46	37	253	
2010	53	8	26	83	41	36	247	
2011	60	10	31	85	27	39	252	
2012	58	4	31	97	28	37	255	
2013	51	4	31	93	35	43	257	

Of the 257 seawater cage sites recorded as being active in 2013, 43 farms were fallow for the entire year whilst 163 farms were fallow for a variable period. There were 51 sites that did not fallow in 2013.

Broodstock Sites

Table 38: Number of sites holding Atlantic salmon broodstock during 2002-2013

Year	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013
Broodstock sites	19	20	15	15	17	20	20	11	10	11	7	8

In 2013, the number of freshwater and seawater sites holding broodstock increased to eight. The number of sites holding broodstock in any one year can be variable, as can be seen from the previous years' figures, which indicate no obvious trend. A total of 5,683 fish were stripped, yielding 56.9 million ova, giving an average yield of 10,012 ova per fish.

Organic Production

Table 39: Organic production of Atlantic salmon during 2010-2013

Year	Number of active cage	Number of cage sites	Production
real	sites	certified as organic	(tonnes)
2010	247	14	6,122
2011	252	10	3,104
2012	255	7	4,597
2013	253	8	5,207

Of the 253 active Atlantic salmon seawater cage sites in 2013, eight had organic certification producing 5,207 tonnes. This is the fourth year that data on organic production has been reported.

Escapes

There were four incidents involving the loss of a total of 9,709 fish from seawater Atlantic salmon sites in 2013. There were four additional reported incidents where the companies confirmed there was no loss of fish.

// 4.OTHER SPECIES

The Scottish aquaculture industry has continued to farm other species of fish during 2013. The production of brown trout, *Salmo trutta*, showed a small increase with the majority of the production being for the angling restocking market. The production of halibut, *Hippoglossus hippoglossus*, decreased and there was no production of Arctic charr, *Salvelinus alpinus*. There was production of cod, *Gadus morhua*, but this figure cannot be shown without revealing the production for an individual company. Several species of wrasse (Labridae) continued to be produced in 2013. The production of wrasse is targeted at the marine Atlantic salmon industry where they are used as a biological control for parasites.

Company, Site and Production Data

Table 40: Number of companies and sites producing other species in 2013, production of other species (tonnes) during 2010-2013 and estimated production in 2014

Species	No. of companies	No. of sites	2010 Production tonnage	2011 Production tonnage	2012 Production tonnage	2013 Production tonnage	2014 Production tonnage*
Arctic charr	0	0	1.5	1.5	0.2	0	0
Brown trout/ Sea trout	15	17	53	61	42	44	55
Cod	1	1	0.7	0	0	†	œ
Halibut	2	4	139	83	73	56	92
Wrasse spp	4	4	0	0	t	0.1	4

^{*} Industry estimates based on stocks currently being on-grown.

Staffing

Table 41: Number of staff employed in farming other species during 2004-2013

Year	Full-time	Part-time	Total
2004	61	18	79
2005	73	18	91
2006	92	17	109
2007	75	29	104
2008	80	44	124
2009	23	22	45
2010	19	24	43
2011	24	19	43
2012	25	21	46
2013	29	21	50

[†] Production occurred but this cannot be shown without revealing the figure for an individual company.

 $[\]infty$ The estimated production for 2014 cannot be shown without revealing the figure for an individual company.

In 2013, the overall number of staff employed in the production of other species increased by four.

Ova Laid Down to Hatch

Table 42: Source of ova from other species laid down to hatch during 2013

	Source of ova laid down to hatch (000s)						
Species	Own broodstock	Other GB broodstock	Foreign ova				
Brown trout/sea trout	658	0	0				
Halibut	‡	0	‡				
Wrasse ssp	7,090	0	0				

[‡] Ova were laid down to hatch in both categories but these data cannot be shown without revealing the figures for an individual company.

Trade in Small Fish

Table 43: Trade in small fish of other species in 2013

Species	Bought (000s)	Sold (000s)
Halibut	44	~
Brown trout/sea trout	69	40
Wrasse ssp	~	16

[~] These data cannot be shown without revealing the figures for individual companies.

There was also a small amount of production of: brook charr, *Salvelinus fontinalis*; carp, *Cyprinus carpio*; Dover sole, *Solea solea*; haddock, *Melanogrammus aeglefinus*; sea bass, *Dicentrarchus labrax*; sheepshead minnow, *Cyprinodon variegatus variegatus*; tiger trout, *Salmo trutta* cross *salvelinus fontinalis*; tilapia, *Tilapia* Spp; turbot, *Psetta maxima* and whiting, *Merlangius merlangus*. However, due to the small number of companies in production, it is not possible to summarise these data without revealing the production of individual companies.

Organic Production

Of the 26 sites recorded as producing other species in 2012, no organic production was reported.

Escapes

There was one reported incident leading to an escape of 6,957 halibut from a site in 2013.

// 5.SUMMARY

Rainbow trout

The production of rainbow trout decreased by 1% in 2013 to 5,611 tonnes and was directed at the table (89.1%) and restocking (10.9%) markets. The total numbers of staff employed by the sector increased by three to 110. There was a slight decrease in the productivity of the industry to 51.0 tonnes per person.

In 2013, the number of eyed ova laid down to hatch (9.9 million) decreased by 3.1 million and was mainly all-female diploid stock (80%). The proportion of ova from GB broodstock increased to 6.2%. There was an increase in trade with the USA (24.1% of total ova imported) and the Isle of Man (8.2% of total ova imported). Northern Ireland was the largest source of imported ova with 52.5% of the total, although this was a decrease proportionally from 2012. There is a continued high dependence of the Scottish trout industry on imported ova, however, imports of part-grown fish have also increased.

Atlantic salmon

In 2013, the total production of Atlantic salmon increased by 1,011 tonnes to 163,234 tonnes, a 0.6% increase on the 2012 production total. This follows a 2.7% increase in 2012 and is the highest production recorded since 2003. The survey shows decreases in the production of grilse and salmon but an increase in the production of pre-salmon. The number of staff directly employed on the farms increased by 27. Overall, there was a decrease in the productivity of tonnes produced per person from 153.2 to 150.3. The estimated harvest forecast for 2014 of 162,374 tonnes is similar to the tonnage produced in 2013. The trend towards concentrating production in larger sites was maintained with 78% of production being concentrated in the sites producing over 1,000 tonnes per annum.

In 2013, there was a slight decrease in the number of ova produced to 56.9 million. The number of ova laid down to hatch increased by 5.3% to 66.6 million. This highlights the trend towards using foreign ova sources with 62.1% of the ova laid down to hatch being imported. The main sources of imported ova were Norway (72.3%, of total ova imported) and Northern Ireland (22.1% of total ova imported). Smolt production decreased to 40.5 million a drop of 8.7% compared with 2012. The number of staff directly employed on freshwater sites decreased by 43 and productivity increased to 142,000 fish per person, however, due to consolidation within the industry there are uncertainties with these staffing and productivity figures. Projections suggest that slightly fewer smolts will be produced in 2014, followed by an increase in 2015.

Other Species

There was an increase in the production of brown/sea trout from 42 tonnes in 2012 to 44 tonnes in 2013. Halibut production decreased and there was no reported production of Arctic charr. Wrasse used as biological controls for parasites in the marine Atlantic salmon farming industry continued to be produced. In 2013, the total number of staff employed in the production of other species increased by four to 50.

// APPENDIX 1

Questionnaires sent to Fish Farmers

ANNUAL RETURN of INFORMATION from SCOTTISH FISH FARMS for the PERIOD 1 JANUARY to 31 DECEMBER 2013 RAINBOW TROUT - DATA

Please complete and return by 31 January 2014 to L A Munro, Marine Scotland Science PO Box 101, Victoria Road, Aberdeen, AB11 9DB

GUIDANCE NOTES FOR QUESTIONNAIRE

RAINBOW TROUT

GENERAL NOTES

- 1. Please check that the pre-printed information on the sheet is correct.
- 2. If a site is inactive and **not part of a fallowing cycle**, please write "INACTIVE" after the site name.
- 3. When completing the boxes please start from the right, if NONE then enter a **zero** in right hand box eg

		0

Hopefully all questions are self explanatory but you may wish to note that:

Q1. How many staff

- a Please give the total number of full and part-time workers employed by the company in rainbow trout production
- b Please ensure that the same staff are NOT included more than once if the company/business operates more than one site
- c Staff employed solely in processing dead fish for marketing should NOT be included

Q2. Accreditation Schemes

Please include membership to trade associations, quality schemes or organic certification schemes.

Q3. Ova laid down for hatching

Give the TOTAL NUMBER of ova laid down, if the number exceeds six figures please indicate the total number clearly in margin beside the appropriate box - this also applies to questions 3-5 Ova from abroad- Northern Hemisphere includes those from Northern Ireland and Isle of Man.

Q8-9. Weight of fish sold for:

Please record the weight of fish sold to the nearest **tonne** (not in kgs), for part tonnes please indicate strongly using a decimal point, eg **31.5**

Q12. Fish Holding Capacity

Please enter the total cubic metre capacity for each type of production unit

ANNUAL RETURN OF INFORMATION FROM SCOTTISH FISH FARMS FOR THE PERIOD 1 JANUARY TO 31 DECEMBER 2013

ATLANTIC SALMON - SMOLT DATA

GUIDANCE NOTES FOR QUESTIONNAIRE ATLANTIC SALMON SMOLTS

GENERAL NOTES

- 1. Please check that the pre-printed information on the sheet is correct.
- If a site is inactive and not part of a fallowing cycle, please write "INACTIVE" after the site name
- 3. When completing the boxes please start from the right, if NONE then enter a **zero** in right hand box eg

	ĺ			0

4. If the numbers for any box exceeds 6 figures please indicate the total number clearly in margin beside the appropriate box

Hopefully all questions are self explanatory but you may wish to note that:

Q1. How many staff

Please enter the total number of full and part-time staff employed in smolt production, this includes maintenance staff and staff seasonally employed for specific purposes, eg vaccination - please indicate clearly if you have contracted out vaccinating work to avoid duplication in numbers

Please ensure that the same staff are NOT included more than once if your company operates more than one site, especially for companies which operate both smolt and salmon grower sites

Companies are asked to use their discretion as to what they class as full and part-time staff

Q2. Accreditation Schemes

Please include membership to trade associations, quality schemes or organic certification schemes.

Q3. Number of ova produced

Enter the total number of ova produced by the company only once, if more than one form is used please enter **zero** or score out on subsequent forms

Q7. How many smolts produced as S1/2 or S1 etc

The definitions used for the survey are:

- $S^{1}/_{2}$ <12 months old, ie put to sea in year of hatch
- S1 12-18 months old, ie put to sea in January-June in year post hatch
- S1¹/₂ 19-24 months old, ie put to sea in July-December in year post hatch
- S2 >24 months old when put to sea
- Q8. Q9. For S1s combine numbers of $S^{1}/_{2}s$ with S1s and For S2s combine numbers of $S^{1}/_{2}s$ with S2s
- Q10. Enter here the total number of smolts (any stage) likely to be produced
- Q11. Please enter the total cubic metre capacity for all tanks or cages combined

Q12. Fallow period - applies to cage sites only

Please enter any weeks that the site was fallow in 2013 (maximum = 52)

ANNUAL RETURN OF INFORMATION FROM SCOTTISH FISH FARMS FOR THE PERIOD 1 JANUARY TO 31 DECEMBER 2013

GUIDANCE NOTES FOR QUESTIONNAIRE

ATLANTIC SALMON

GENERAL NOTES

- 1. Please check that the pre-printed information on the sheet is correct.
- 2. If a site is inactive and **not part of a fallowing cycle**, please enter "INACTIVE" after the site name.
- 3. All harvest tonnages should be supplied for the wet weight of fish at harvest.
- 4. If a site was used **only to hold broodstock** for stripping please enter "BRD" after the site name.
- 5. When completing the boxes please start from the right eg for 250 tonnes enter as 2 5 0 or if NONE then enter as 0

Hopefully all questions are self explanatory but you should note that:

Q1. How many staff

Please enter the total number of full and part-time workers employed in salmon production; this includes site staff, veterinary and maintenance staff, vaccination teams, administrative and harvesting staff but NOT processing or marketing staff

Please ensure that the same staff are NOT included more than once if the company operates more than one site, especially if your company operates both salmon grower and smolt sites.

Q2. Accreditation Schemes

Please include membership to trade associations, quality schemes or organic certification schemes.

Q3. How many smolts put to sea

The definitions used for the survey are:

- $S^1/_2$ <12 months old, ie put to sea in year of hatch
- **S1 12-18 months old**, ie put to sea in January-June in the year post hatch
- $S1^{1}/_{2}$ 19-24 months old, ie put to sea in July-December in the year post hatch
- S2 >24 months old, ie when put to sea

Q12. Broodstock production

Please circle YES if broodfish were produced on the site

Q13. Fish holding capacity

Please enter the total cubic metre capacity for all tanks and cages combined or, if not known, give the size of tanks or cages (area or circumference plus depth x nos tanks or cages)

Q14. Fallow period

For cage sites only; please enter any number of weeks a site was fallow in 2013; the total number of fallow weeks should not exceed 52

ANNUAL RETURN of INFORMATION from SCOTTISH FISH FARMS for the PERIOD 1 JANUARY to 31 DECEMBER 2013 OTHER SPECIES - DATA

TRO	Brown/sea trout	TUR	Turbot					

Q1. How many staff

Please include those staff that were involved only in other species production. Please do not include staff that are involved in the production of Atlantic salmon or rainbow trout.

Q2. Accreditation Schemes

Please include membership to trade associations, quality schemes or organic certification schemes.

Q5 - 7. Weight of fish sold

Please record the wet weight of fish sold to the nearest **tonne** (not in kgs), for part tonnes please indicate strongly using a decimal point, e.g. **31.5**

// APPENDIX 2

Glossary and Abbreviations

Active Fish farms in a production growing cycle which may contain stock or

be fallow.

Alevin Young fish, at stage from hatching to end of dependence on yolk sacs

as primary source of nutrition.

Approved

National Control

Measures

Disease control measures in accordance with The Aquatic Animal

Health (Scotland) Regulations 2009.

Broodstock Adult fish held until maturation for breeding purposes.

Diploid Fish with the normal two sets of chromosomes.

EEA European Economic Area.

EFTA European Free Trade Association.

ERM Enteric redmouth disease.

EU European Union.

Eyed-ova/eggs

Fish egg(s) at the stage of development when the heavily pigmented

eyes of the embryo are sufficiently developed to be clearly visible.

Fish farm having no stock, but still part of a growing cycle.

Fingerling A term commonly applied to young stages of salmonid fish.

Fry The life stage of a young salmon from independence of the yolk sac

as the primary source of nutrition to dispersal from the redd.

Gamete Reproductive cells.

Grilse Salmon harvested between 1st January and 31st August after one

winter at sea

Intra-peritoneal Within the body cavity.

IPN Infectious pancreatic necrosis.

Non-producing

A site which is active, may be stocked with fish, but has produced no

fish for harvest during the specified year.

On-growing Farm producing fish for the table market.

Ova Eggs.

0-year fish Fish in their first year of life.

MSS Marine Scotland Science.

Parr Young salmon at stage from dispersal from redd to migration as a

smolt.

PD Pancreas disease.

Photoperiod Alteration of the daylight regime.

Pre-salmon Salmon harvested between 1st September and 31st December after

one winter at sea.

Raceway Concrete or brick channels used for farming fish.

SAV Salmonid alphavirus.

Salmon or sea trout smolting at approximately six months from hatch

(usually by photoperiod and/or temperature manipulation).

Salmon or sea trout smolting at approximately one year from hatch.

Salmon or sea trout smolting at approximately 18 months from hatch.

Salmon or sea trout smolting at approximately two years from hatch.

Smolt Fully silvered juvenile salmon ready to be transferred or to migrate

to sea.

Third Country Country outside the EU.

Triploid Genetically modified fish that have three sets of chromosomes

instead of two.

Year class Fish hatched or put to sea in a given year.
